Mathematical Reviews ,2001   Astronautics and Aeronautics, 1985 United States. National Aeronautics and Space Administration. Scientific and Technical Information Division,1988   **Tensors: Asymptotic Geometry and Developments 2016-2018** J.M. Landsberg,2019-07-05 Tensors are used throughout the sciences especially in solid state physics and quantum information theory This book brings a geometric perspective to the use of tensors in these areas It begins with an introduction to the geometry of tensors and provides geometric expositions of the basics of quantum information theory Strassen s laser method for matrix multiplication and moment maps in algebraic geometry It also details several exciting recent developments regarding tensors in general In particular it discusses and explains the following material previously only available in the original research papers 1 Shitov s 2017 refutation of longstanding conjectures of Strassen on rank additivity and Common on symmetric rank 2 The 2017 Christandl Vrana Zuiddam quantum spectral points that bring together quantum information theory the asymptotic geometry of tensors matrix multiplication complexity and moment polytopes in geometric invariant theory 3 the use of representation theory in quantum information theory including the solution of the quantum marginal problem 4 the use of tensor network states in solid state physics and 5 recent geometric paths towards upper bounds for the complexity of matrix multiplication Numerous open problems appropriate for graduate students and post docs are included throughout   **Proceedings of the Third International Conference on Trends in Computational and Cognitive Engineering** M. Scientific and Technical Aerospace Reports ,1994   **Lady Astronauts, Lady Engineers, and Naked Ladies** Karin Hilck,2019-07-08 The book Lady Astronauts Lady Engineers and Naked Ladies is a gender history of the American space community and by extension a social history of American society in the twentieth century during the Cold War In order to expand and differentiate the prevalent postwar narrative about gender relations and cultural structures in the United States the book analyzes several different groups of women interacting in different social spaces within the space community It therewith grants insight into the several layers of female participation and agency in the community and the gender and race based obstacles and hurdles the female prospective astronauts scientists engineers artists administrators writers hostesses secretaries and wives were faced with at NASA and in the space industry In each chapter a different social space within the space community is analyzed The spaces where the women lived and worked are researched from a media individual and

institutional angle ultimately revealing the differing gender philosophies communicated in the public sphere and the space community workplaces by government and space community officials While women were publicly encouraged to participate in the American space effort to beat the Soviet Union in the race to the moon women had to deal with gender based barriers which were integral to the structures of the space community just as they were an intrinsic component of all societal structures in the United States in the 1960s The female space workers who were often perceived as disrupters of the prevalent social order in the space community and discriminated by some of their male colleagues and bosses on a personal basis still managed to assert themselves They molded pockets of agency in the space community workspaces without the facilitation of regulations on the part of NASA that might have provided them with easier access or more agency Thus the space community a place of technological innovation was not necessarily also a place of social innovation but a community with a government agency at its center that mainly mirrored the current changing social order conventions and policies in the 1960s as well as in the 1970s and 1980s Nevertheless the women presented in this book were instrumental in advancing and consolidating the social transformation that happened within the space community and the United States and therefore make intriguing subjects of research Thus this systematic analysis of the connection between gender space and the Cold War adds a new dimension to space history as well as expands the discourse in American history about gender relations and the opportunities of women in the twentieth century   **Advances in Computer Algebra** Carsten Schneider,Eugene Zima,2018-02-26 This book discusses the latest advances in algorithms for symbolic summation factorization symbolic numeric linear algebra and linear functional equations It presents a collection of papers on original research topics from the Waterloo Workshop on Computer Algebra WWCA 2016 a satellite workshop of the International Symposium on Symbolic and Algebraic Computation ISSAC 2016 which was held at Wilfrid Laurier University Waterloo Ontario Canada on July 23 24 2016 This workshop and the resulting book celebrate the 70th birthday of Sergei Abramov Dorodnicyn Computing Centre of the Russian Academy of Sciences Moscow whose highly regarded and inspirational contributions to symbolic methods have become a crucial benchmark of computer algebra and have been broadly adopted by many Computer Algebra systems   The Electrical World ,1892   Applied Mechanics Reviews ,1980   *Combinatorial Algorithms* Leszek Gąsieniec,Ralf Klasing,Tomasz Radzik,2020-05-28 This book constitutes the proceedings of the 31st International Workshop on Combinatorial Algorithms which was planned to take place in Bordeaux France during June 8 10 2020 Due to the COVID 19 pandemic the conference changed to a virtual format The 30 full papers included in this book were carefully reviewed and selected from 62 submissions They focus on algorithms design for the myriad of combinatorial problems that underlie computer applications in science engineering and business   **Open Problems in Algebraic Combinatorics** Christine Berkesch,Benjamin Brubaker,Gregg Musiker,Pavlo Pylyavskyy,Victor Reiner,2024-08-21 In their preface the editors describe algebraic combinatorics as the area of combinatorics concerned with exact as opposed to approximate results and which puts

emphasis on interaction with other areas of mathematics such as algebra topology geometry and physics It is a vibrant area which saw several major developments in recent years The goal of the 2022 conference Open Problems in Algebraic Combinatorics 2022 was to provide a forum for exchanging promising new directions and ideas The current volume includes contributions coming from the talks at the conference as well as a few other contributions written specifically for this volume The articles cover the majority of topics in algebraic combinatorics with the aim of presenting recent important research results and also important open problems and conjectures encountered in this research The editors hope that this book will facilitate the exchange of ideas in algebraic combinatorics **Commerce Business Daily** ,2000-03 Fundamentals of Computation Theory Zoltan Esik,1993-08-04 This volume contains the proceedings of the Ninth Conference on Fundamentalsof Computation Theory FCT 93 held in Szeged Hungary in August 1993 The conference was devoted to a broad range of topics including Semanticsand logical concepts in the theory of computing and formal specification Automata and formal languages Computational geometry algorithmic aspects of algebra and algebraic geometry cryptography Complexity sequential parallel distributed computing structure lower bounds complexity of analytical problems general concepts Algorithms efficient probabilistic parallel sequential distributed Counting and combinatorics in connection with mathematical computer science The volume contains the texts of 8 invitedlectures and 32 short communications selected by the international program committee from a large number of submitted papers *World Who Is Who and Does What in Environment and Conservation* Nicholas Polunin,2013-11-05 Qaidu 1236 1301 one of the great rebels in the history of the Mongol Empire was the grandson of Ogedei the son Genghis Khan had chosen to be his heir This boof recounts the dynastic convolutions and power struggle leading up to his rebellion and subsequent events **Theoretical Computer Science** Dingzhu Du,Lian Li,En Zhu,Kun He,2017-10-14 This book constitutes the thoroughly refereed proceedings of the National Conference of Theoretical Computer Science NCTCS 2017 held in Wuhan Hubei China in October 2017 The 25 full papers presented were carefully reviewed and selected from 84 submissions They present relevant trends of current research in the area of algorithms and complexity software theory and method data science and machine learning theory **Computer Algebra in Scientific Computing** Vladimir P.
