Philosophical Foundations of Fiduciary Law Andrew S. Gold, Paul B. Miller, 2014-08-14 Fiduciary law is a critically important body of law. Fiduciary duties ensure the integrity of a remarkable variety of relationships, institutions, and organizations. They apply to relationships of great personal significance, including in some jurisdictions the relationship between parents and children. They structure a wide variety of commercial relationships, and they are essential to the regulation of relationships between professional service providers and their clients, including relationships between lawyer and client, doctor and patient, and investment manager and client. Fiduciary duties, perhaps uniquely in private law, challenge traditional ways of marking the boundaries between private and public law, inasmuch as they figure prominently in public governance. Indeed, there is even a storied tradition of thinking of the authority of the state in fiduciary terms. Notwithstanding its importance, fiduciary law has been woefully under-analysed by legal theorists. Filling this gap with a series of chapters by leading theorists, this book includes chapters on the nature of fiduciary relationships, the connection between fiduciary duties and morality, the content and significance of fiduciary loyalty, the economic significance of fiduciary law, the application of fiduciary principles to public law and international law, the import of fiduciary relationships to theories of authority, and various other fundamental topics in the field. In many cases, new and important questions are raised by the book's chapters. Indeed, this book not only offers a much-needed theoretical assessment of fiduciary topics, it defines the field, going forward, setting an agenda for future philosophical study of fiduciary law.

Massively Parallel Processing Applications and Development L. Dekker, W. Smit, J.C. Zuidervart, 2013-10-22 The contributions of a diverse selection of international hardware and software specialists are assimilated in this book's exploration of the development of massively parallel processing (MPP). The emphasis is placed on industrial applications and collaboration with users and suppliers from within the industrial community consolidates the scope of the publication. From a practical point of view, massively parallel data processing is a vital step to further innovation in all areas where large amounts of data must be processed in parallel or in a distributed manner, e.g., fluid dynamics, meteorology, seismics, molecular engineering, image processing, parallel database processing. MPP technology can make the speed of computation higher and substantially reduce the computational costs. However, to achieve these features, the MPP software has to be developed further to create user-friendly programming systems and to become transparent for present-day computer software. Application of novel electro-optic components and devices is continuing and will be a key for much more general and powerful architectures. Vanishing of communication hardware limitations will result in the elimination of programming bottlenecks in parallel data processing. Standardization of the functional characteristics of a programming model of massively parallel computers will become established. Then efficient programming environments can be developed. The result will be a widespread use of massively parallel processing systems in many areas of application.
