A Disequilibrium Model of Real and Financial Accumulation in an Open Economy Giancarlo Gandolfo, Pietro C. Padoan, 2012-12-06 This is the fourth version of a model that five years ago we set out to build and estimate along the lines of the continuous time approach clarified In chapter 1 Previous versions appeared in journal articles and conference proceedings where the space is notoriously limited Therefore we welcome the possibility of publishing a book length treatment of this fourth version so that we can describe its theoretical and empirical aspects in some detail Although we have worked closely together and accept joint responsibility for the whole book chs 1 and 2 and appendix I have been written by G Gandolfo whilst chs 3 and 4 and appendix II have been written by P c Padoan Different parts of this version of the model have been discussed In various lectures at the European University Institute Florence in 1984 In a seminar organized by the Bank of Italy Sadiba Perugia Italy February 16 18 1984 in the second Viennese Workshop on Economic Applications of Control Theory Vienna May 16 18 1984 and in the sixth annual Conference of the Society for Economic Dynamics and Control Nice France June 13 15 1984 In all of these we received helpful comments similarly helpful were the comments of Clifford R Wymer who however is absolved of any responsibility

Arbitrage Theory Jochen E.M. Wilhelm, 2012-12-06 The present Introductory Lectures on Arbitrage based Financial Asset Pricing are a first attempt to give a comprehensive presentation of Arbitrage Theory in a discrete time framework by the way all the re sults given in these lectures apply to a continuous time framework but probably in continuous time we could achieve stronger results of course at the price of stronger assumptions It has been turned out in the last few years that capital market theory as derived and evolved from the capital asset pricing model CAPM in the middle sixties can to an astonishing extent be based on arbitrage arguments only rather than on mean variance preferences of investors On the other hand ar bitrage arguments provided access to a wider range of results which could not be obtained by standard CAPM methods e g the valuation of contingent claims derivative assets Dr the_ investigation of futures prices To some extent the presentation will loosely follow historical lines A selected set of capital asset pricing models will be derived according to their historical progress and their increasing complexity as well It will be seen that they all share common structural properties After having made this observation the presentation will become an axiomatical one it will be stated in precise terms what arbitrage is about and what the consequences are if markets do not allow for risk free arbitrage opportunities The presentation will partly be accompanied by an illus trating example two state option pricing

Sparse Grids and Applications Jochen Garcke, Michael Griebel, 2012-10-13 In the recent decade there has been a growing interest in the numerical treatment of high dimensional problems It is well known that classical numerical discretization schemes fail in more than three or four dimensions due to the curse of dimensionality The technique of sparse grids helps overcome this problem to some extent under suitable regularity assumptions This discretization approach is obtained from a multi scale basis by a tensor product construction and subsequent truncation of the resulting multiresolution series expansion This volume of LNCSE is a collection of the papers from the proceedings of the workshop on sparse grids and its applications held in Bonn in May 2011 The selected articles present recent advances in the mathematical understanding and analysis of sparse grid discretization Aspects arising from applications are given particular attention
