

## 18.1 Finding Order in Diversity

### Learning Objectives

- LO1** Describe the goals of taxonomic classification and nomenclature.
- LO2** Identify the levels of the classification system derived by Linnaeus.

### Learning Objectives

**Assigning Scientific Names** By using Linnaeus's system of nomenclature, biologists assign the most appropriate names. Biologists also use nomenclature to group organisms based on their relationships. Biologists use a hierarchical system. The concept of naming and grouping organisms is called **taxonomy**.

For example, Linnaeus classified *Linnaea borealis*, a flowering species, called **taxonomic classification**. In taxonomic classification, each species is assigned a two-part scientific name.

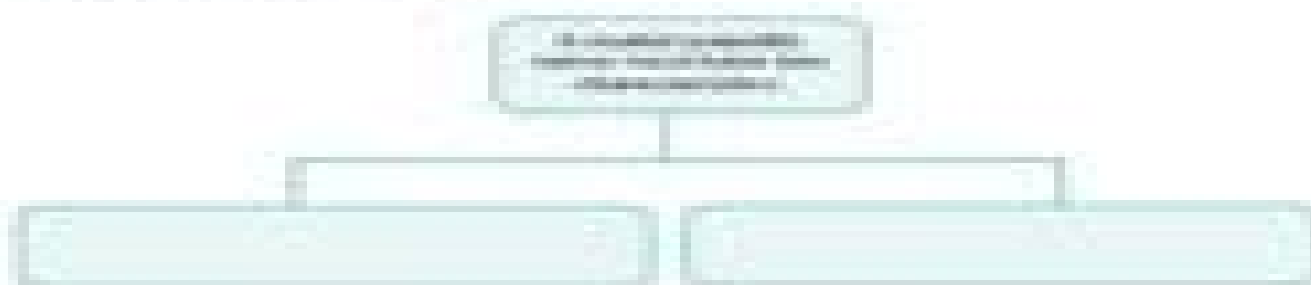

- 1. The first part of the name refers to the genus, or a group of similar species.
- 2. The second part of the name is unique to each species.

**Linnaeus's Classification System** Linnaeus's system of classification has seven different levels. Biologists use Linnaeus's hierarchy to identify and group species. Family, order, class, phylum, and kingdom. Each of the ranking levels is called a **taxon**.

- 1. Genus is a group of similar species, a family is a group of similar genera.
- 2. An order is a group of similar families.
- 3. A class is a group of similar orders.
- 4. A phylum is a group of similar classes.
- 5. A kingdom is a group of similar phyla.

### Assigning Scientific Names

- 1. Complete the graphic organizer.
