

Lesson 4:-

Fire extinguishers

Objectives:-

- State the conditions required for combustion relevant to fire
- State the general precautionary measures to be taken for fire prevention
 - Determine the correct type of fire extinguisher required for a particular function
- State environment, health and safety.

Fire is nothing but burning of a combustible material. For combustion the three main requirements are:- **1) Oxygen 2) Fuel 3) Heat**

Fuel can be any combustible substance in the form of a solid, liquid or gas

Fuels will begin to burn at a certain **temperature**. Different types of fuels need different temperatures to catch fire and burn

Oxygen exists in air. To keep a fire burning, oxygen is a must

“Isolating or removing any of these three factors will control and extinguish fire”

Controlled and uncontrolled fire

Fire is a boon to mankind as long as it is with in our control. But if the fire goes uncontrollable, then it may cause heavy damages.

When there is a fire outbreak, **it must be controlled and extinguished immediately without any delay.**

Preventing fire :- The majority of fires begin with small outbreaks. If this is not noticed, fire goes out of control and will be on its way of destruction.
