Understanding of Fractions In Second, Third, and Fourth Grade Phoenix Ashley Dudley,2017 This study investigates how well students in second third and fourth grade understand various fraction related concepts including naming creating and manipulating fractions in addition to identifying expressions from story problems Data in this study will be collected and analyzed for the purpose of informing third grade teachers of student understanding of fractions before the third grade fraction curriculum is taught Furthermore data will inform third grade teachers of what fraction content students are retaining in fourth grade This study aims to answer the question How in depth is student understanding of fractions before

and after the third grade curriculum is taught In order to conduct this study 225 students were given one paper and pencil assessment administered in their own classrooms Questions were read aloud and students were asked to record answers on the test paper Assessment questions were scored as correct partially correct or incorrect Data collected for the different question types was then analyzed by comparing data across grade levels genders and ethnicities within the tested population The results showed that there was significance between grade levels for most of the test categories This is likely due to the fact that each year students retain knowledge from the previous year then deepen their understanding Additional analysis showed that there was only significance in gender when multiplying two fractions by each other however there is no plausible explanation for this as students of both genders have been taught the same curriculum Final analysis revealed that there was no significance in ethnicity despite the high population of students that have a native language other than English In conclusion the biggest contributing factor to student understanding of fractions is grade level the higher the grade level the better the understanding These results support the idea that the third grade fraction curriculum has a great impact with regard to ensuring students gain knowledge of fraction manipulation and carry that knowledge with them into the following grade
