The Problem with Solutions Julie Guthman,2024-08-06 A concise and feisty takedown of the all style no substance tech ventures that fail to solve our food crises Why has Silicon Valley become the model for addressing today s myriad social and ecological crises With this book Julie Guthman digs into the impoverished solutions for food and agriculture currently emerging from Silicon Valley urging us to stop trying to fix our broken food system through finite capitalistic solutions and technological moonshots that do next to nothing to actualize a more just and sustainable system The Problem with Solutions combines an analysis of the rise of tech company solution culture with findings from actual research

on the sector's ill informed attempts to address the problems of food and agriculture. As this seductive approach continues to infiltrate universities and academia, Guthman challenges us to reject apolitical and self gratifying techno solutions and develop the capacity and willingness to respond to the root causes of these crises. Solutions she argues are a product of our current condition, not an answer to it.

Computers in Fisheries Research Bernard A. Megrey, Erlend

Moksness, 2008-11-26 The first edition of this book was published by Chapman and Hall Ltd in 1996. The first edition contained nine chapters and for all except one chapter the original chapter authors agreed to update their chapter. Comparing these chapters gives the reader an idea of the development over a time span of more than 10 years between the two editions. In the preparation of the second edition we decided to add more chapters reflecting some important fields with significant contributions to present day fishery research. These are the use of internet for searching of information Chapter 2 and the present state and use of remote sensing Chapter 5, ecosystem modeling Chapter 8 and visualization of data Chapter 10. This second edition provides a valuable sampling of contemporary applications. Scientists have an opportunity to evaluate the suitability of different computer technology applications to their particular research situation, thereby taking advantage of the experience of others. The chapters that follow are the fruition of this idea. The history behind this book started in 1989 when we were asked by Dr Vidar Weststad, previously Alaska Fisheries Science Center, Seattle, USA, to prepare and convene a session at the 1992 World Fishery Congress in Athens, Greece, on computer applications in fisheries. We agreed that the idea was a good one and the computer session in 1992 turned out to be very successful.

Civic Innovation in America Carmen

Sirianni, Lewis Friedland, 2001-07-01 In this book two leading experts on community action provide the first scholarly examination of the civic renewal movement that has emerged in the United States in recent decades. Sirianni and Friedland examine civic innovation since the 1960s as social learning in four arenas: community organizing, development, civic environmentalism, community health and public journalism, and they link local efforts to broader networks and to the development of public policy for democracy. They also explore the emergence of a movement for civic renewal that builds upon the civic movements in these four arenas. In contrast to some recent studies that stress broad indicators of civic decline, this study analyzes innovation as a long process of social learning within specific institutional and policy domains with complex challenges and cross currents. It draws upon analytical frameworks of social capital, policy learning, organizational learning, regulatory culture, democratic theory and social movement theory. The study is based upon interviews with more than 400 innovative practitioners as well as extensive field observation, case study, action research and historical analysis.

Creating the Market University Elizabeth Popp Berman, 2012-01-08 Academic science in the U.S. once self consciously

avoided the market. But today it is seen as an economic engine that keeps the nation globally competitive. *Creating the Market University* compares the origins of biotech entrepreneurship, university patenting and university industry research centers to show how government decisions shaped by a new argument that innovation drives the economy transformed

academic science Provided by publisher *Climate Change* A. Barrie Pittock, 2013-11-26 It is widely accepted in the scientific community that climate change is a reality and that changes are happening with increasing rapidity In this second edition leading climate researcher Barrie Pittock revisits the effects that global warming is having on our planet in light of ever evolving scientific research Presenting all sides of the arguments about the science and possible remedies Pittock examines the latest analyses of climate change such as new and alarming observations regarding Arctic sea ice the recently published IPCC Fourth Assessment Report and the policies of the new Australian Government and how they affect the implementation of climate change initiatives New material focuses on massive investments in large scale renewables such as the kind being taken up in California as well as many smaller scale activities in individual homes and businesses which are being driven by both regulatory and market mechanisms The book includes extensive endnotes with links to ongoing and updated information as well as some new illustrations While the message is clear that climate change is here and in some areas might already be having disastrous effects there is still hope for the future and the ideas presented here will inspire people to take action *Climate Change The Science Impacts and Solutions* is an important reference for students in environmental or social sciences policy makers and people who are genuinely concerned about the future of our environment

Engineering Psychology and Human Performance Christopher D. Wickens, William S. Helton, Justin G. Hollands, Simon Banbury, 2021-09-27 Forming connections between human performance and design this new edition of *Engineering Psychology and Human Performance* examines human machine interaction The book is organized directly from a psychological perspective of human information processing and chapters correspond to the flow of information as it is processed by a human being from the senses through the brain to action rather than from the perspective of system components or engineering design concepts Upon completing this book readers will be able to identify how human ability contributes to the design of technology understand the connections within human information processing and human performance challenge the way they think about technology s influence on human performance and show how theoretical advances have been or might be applied to improving human machine interactions This new edition includes the following key features A new chapter on research methods Sections on interruption management and distracted driving as cogent examples of applications of engineering psychology theory to societal problems A greatly increased number of references to pandemics technostress and misinformation New applications Amplified emphasis on readability and commonsense examples Updated and new references throughout the text This book is ideal for psychology and engineering students as well as practitioners in engineering psychology human performance and human factors The text is also supplemented by online resources for students and instructors

Democracy, Dialogue, and Environmental Disputes Bruce A. Williams, Albert R. Matheny, 1998-04-01 At every level of government environmental regulation is under siege In Washington it has been attacked first through the New Federalism and now through the Contract with America Outside the capital environmental

regulation is the subject of controversy as state and local officials struggle with new responsibilities threats of industry exit and challenges from grassroots groups This book addresses the conundrum of regulation by tracing its source to the competing characterizations of regulatory legitimacy that have accompanied the growth of the American state Bruce Williams and Albert Matheny identify three distinct languages managerial pluralist and communitarian used to articulate competing visions of regulation They argue that each language posits a different understanding of the public interest and therefore a different relationship between the state the market and the public Because all three languages are invoked in regulatory debates disputants talk past one another leaving fundamental issues of legitimacy and democracy unresolved or masked by unexamined assumptions The authors propose a dialogic model for analyzing regulatory policymaking drawing on postmodernist theory that claims that establishing single languages for understanding the world inevitably distorts communication They then apply their analysis to case studies of actual environmental disputes over hazardous waste regulation in the 1980s and 1990s in New Jersey Ohio and Florida *Prospects and challenges for the implementation of HTS genetic methods in fisheries research surveys and stock assessments*.
