

7.3 Gene Linkage and Mapping

- Cross-over frequencies can be converted into map units.

– gene A and gene B cross over 6.0 percent of the time

– gene B and gene C cross over 12.5 percent of the time

– gene A and gene C cross over 18.5 percent of the time

$$6 + 12.5 = 18.5$$

Study Guide for Genetics, Third Edition, Daniel L. Hartl Rowland H. Davis, Stephen J. Weller, John P. Carulli, 1994

Heterogeneity in Statistical Genetics Derek Gordon, Stephen J. Finch, Wonkuk Kim, 2020-12-16 Heterogeneity or mixtures are ubiquitous in genetics Even for data as simple as mono genic diseases populations are a mixture of affected and unaffected individuals Still most statistical genetic association analyses designed to map genes for diseases and other genetic traits ignore this phenomenon In this book we document methods that incorporate heterogeneity into the design and analysis of genetic and genomic association data Among the key qualities of our developed statistics is that they include mixture parameters as part of the statistic a unique component for tests of association A critical feature of this work is the inclusion of at least one heterogeneity parameter when performing statistical power and sample size calculations for tests of genetic association We anticipate that this book will be useful to researchers who want to estimate heterogeneity in their data develop or apply genetic association statistics where heterogeneity exists and accurately evaluate statistical power and sample size for genetic association through the application of robust experimental design
