A Fair Deal on Talent - Fostering Just Migration Governance Bertelsmann Stiftung, 2015-05-12 If well managed migration generates benefits for migrants their countries of origin and the countries they settle in For migrants it can help them expand their skill sets and improve their standard of living For destination countries it can alleviate demographic pressures and foster cultural diversity For origin countries it can bring benefits associated with remittances and knowledge transfers However in reality these benefits are rarely achieved as migration policy failures frequently lead to suboptimal or even negative outcomes Realizing the full potential of migration therefore demands we foster a paradigm shift toward the fair management of migration Fair migration is driven by the desire to achieve a triple win for migrants destination countries and origin countries In addition to outlining the key challenges and opportunities associated with fair migration this volume examines the good practices of a variety of countries and institutions which highlight aspects of fair migration The volume concludes with policy recommendations for effective and fair migration policymaking at the national and international levels As a conceptual and empirical contribution to both national and international debates on managing migration this volume aims to enrich discussions among policymakers business leaders civil society actors and scholars alike **Parliamentary**

Plantation Life Tania Murray Li, Pujo Semedi, 2021-09-27 In Plantation Life Tania Murray Li and Pujo Semedi examine the structure and governance of Indonesia s contemporary oil palm plantations in Indonesia which supply 50 percent of the world s palm oil They attend to the exploitative nature of plantation life wherein villagers well being is sacrificed in the name of economic development While plantations are often plagued by ruined ecologies injury among workers and a devastating loss of livelihoods for former landholders small scale independent farmers produce palm oil more efficiently and with far less damage to life and land Li and Semedi theorize corporate occupation to underscore how massive forms of capitalist production and control over the palm oil industry replicate colonial style relations that undermine citizenship In so doing they question the assumption that corporations are necessary for rural development contending that the dominance of plantations stems from a political system that privileges corporations

Fair Trade and Organic Initiatives in Asian Agriculture Rie Makita, Tadasu Tsuruta, 2017-03-16. In addition to constituting an evolving area of inquiry within the social sciences, agricultural certification and particularly its Fair Trade and organic components has emerged as a significant tool for promoting rural development in the global South. This book is unique for two reasons. First, in contrast to existing studies that have tended to examine Fair Trade and organic certification as independent systems, the studies presented in this book reveal their joint application within actual production settings, demonstrating the greater complexity entailed in these double certification systems through the generation of contradictions and tensions compared with single certification systems. Second, the authors, who are both Asian, reveal the realities of applying Fair Trade and organic certification systems within Asian agriculture. In doing so, they challenge the fact that most Fair Trade studies have been undertaken by Western scholars who have tended to focus on Latin American and African producers. Drawing on a wealth of grounded case studies conducted in India, Thailand, and the Philippines, this pioneering study on double certification makes a significant contribution to studies on Fair Trade and organic agriculture beyond Asia.

Routledge Handbook of Social and Sustainable Finance Othmar M. Lehner, 2016-06-23. Routledge Handbook of Social and Sustainable Finance brings together an international cast of leading authorities to map out and display the disparate voices, traditions, and professional communities engaged in social finance activity. With a clear societal or environmental mission, foundations, individual and group investors, as well as public bodies around the world, have become increasingly eager to finance and support innovative forms of doing business. Together, founders and established businesses alike are embracing new sustainable business models with a distinct stakeholder approach to tackle social or environmental problems in what they see as a failed economic system in crisis. As a result, the topic of social and sustainable finance is at the forefront of financial-economic thought. This Handbook is divided up into three parts. The first, *The Landscape of Social and Sustainable Finance and Investments*, comprises chapters from a multitude of perspectives in an effort to grasp the entirety of the landscape. The second, *Challenges, Suggestions, Critiques, and Debates*, focuses on areas ranging from sociological underpinnings to critical takes on markets and the identification of specialized business models. Amongst ethical considerations, topics include the scaling of impact, an analysis of sustainability as risk prevention, and comparative analyses of various methods of justification and measurement. In the third and final section, *Markets and Institutions*, contributions range from various perspectives on sustainable banking to environmental marketplaces and finally on to practical cases and country-specific observations. This volume is essential reading for both academics and students in economics and finance. It is also of interest to those who study environmental economics, microeconomics, and banking. **The United Arab Emirates** Kristian Coates Ulrichsen, 2016-12-01. Distance, Rating Systems and Enterprise Finance Franz Flögel, 2018-07-27 In response to the credit crunch during the global financial crisis of 2007 2008 many have called for the re establishment of regional banks in the UK and elsewhere In this context Germany's regional banking system with its more than 1 400 small and regional savings banks and cooperative banks is viewed as a role model in the financing of small and medium sized enterprises SMEs However in line with the death of distance debate the universal application of ICT based scoring and rating systems potentially obviates the necessity for proximity to reduce information asymmetries between banks and SMEs calling into question the key advantage of regional banks Utilising novel ethnographic findings from full time participant observation and interviews this book presents intimate insights into regional savings banks and compares their SME lending practices with large nationwide operating commercial banks in Germany The ethnographic insights are contextualised by concise description of the three pillar German banking system covering bank regulation structural and geographical developments and enterprise finance Furthermore the book advances an original theoretical approach that combines classical banking theories with insights from social studies of finance on the ontological foundation of new realism Ethnographic findings reveal varying distances of credit granting depending on the rating results i e large banks allocate considerable credit granting authority to local staff and therefore challenge the proximity advantages of regional banks Nevertheless by presenting case studies of lending to SMEs the book demonstrates the ability of regional banks to capitalise on proximity when screening and monitoring financially distressed SMEs and explains why the suggestion that ICT can substitute for proximity in SME lending has to be rejected
