Solomonovich, 2010 This textbook is a self contained presentation of Euclidean Geometry a subject that has been a core part of school curriculum for centuries The discussion is rigorous axiom based written in a traditional manner true to the Euclidean spirit Transformations in the Euclidean plane are included as part of the axiomatics and as a tool for solving construction problems The textbook can be used for teaching a high school or an introductory level college course It can be especially recommended for schools with enriched mathematical programs and for homeschoolers looking for a rigorous traditional discussion of geometry The text is supplied with over 1200 questions and problems ranging from simple to challenging The solutions sections of the book contain about 200 answers and hints to solutions and over 100 detailed solutions involving proofs and constructions More solutions and some supplements for teachers are available in the Instructor's Manual which is issued as a separate book Book Reviews In terms of presentation this text is more rigorous than any existing high school textbook that I know of It is based on a system of axioms that describe incidence postulate a notion of congruence of line segments and assume the existence of enough rigid motions free mobility My gut reaction to the book is wouldn't it be wonderful if American high school students could be exposed to this serious mathematical treatment of elementary geometry instead of all the junk that is presented to them in existing textbooks This book makes no concession to the TV generation of students who want or is it the publishers who want it for them pretty pictures side bars puzzles games historical references cartoons and all those colored images that clutter the pages of a typical modern textbook while the mathematical content is diluted more and more with each successive edition Professor Robin Hartshorne University of California at Berkeley The textbook Euclidean Geometry by Mark Solomonovich fills a big gap in the plethora of mathematical textbooks it provides an exposition of classical geometry with emphasis on logic and rigorous proofs I would be delighted to see this textbook used in Canadian schools in the framework of an improved geometry curriculum Until this day comes I highly recommend Euclidean Geometry by Mark Solomonovich to be used in Mathematics Enrichment Programs across Canada and the USA Professor Yuly Billig Carlton University **Geometry** Ron Larson, 1995 Geometry Iii Tm' 2001 Ed. , A Geometry Reader Julius J. **Curricular Program Implementation in the Context of Randomized Field Trials** Gloria Isabel Miller, 2011 Abstract curricular program

implementation in the context of randomized field trials Gloria Isabel Miller This study examined three cases of commercially available curricular program implementations to determine if a unified approach to measuring the level of implementation was possible proof of concept Further the study investigated whether the level of curriculum and implementation plan specificity made a difference to the strength of implementation achieved in classrooms and described the implementation evolution in different contexts The study sample consists of a total of 163 teachers in eight school districts across the United States In each case teachers were randomly assigned to using the curricular innovation or their currently used materials and processes The three cases HS Math NewScience and MathIntervention were purposely chosen to represent three different points of curricular and implementation specificity and two different subject areas math and science Each case features a commercially available program that also had opportunities for teachers to use electronic technology to enhance their learning or to engage their students The cases represent differing student grade levels The cases are different enough to provide a range that exercises the measurement techniques introduced in this study so results can begin to generalize across curricular programs and grades However the cases are similar enough in research design instrumentation and data collection methods to make them comparable A key contribution of this investigation is the creation of a framework to measure the level of implementation the extent to which the teacher and students display the actions behaviors and interactions expected by using the innovation The unified conceptual framework arrived at by using an Activity Theory perspective together with the analytical methods employed provide a way to view the rich complex interaction of implementation as a system with the larger system of the school organization Data from the analysis revealed that variations in the level of implementation were no different regardless of the level of specificity A strong finding of this work is that implementation evolves slowly even when the curricular program is scripted and coaching support is provided to teachers The paper concludes with implications for policy and future research
