Catherine Besteman, Hugh Gusterson, 2019-05-23 Essays on the downsides, dysfunctions and dangers of automated decision making. An excellent survey of the algorithmically managed life. Choice. The phone systems that businesses use to screen calls. The link between student standardized test scores and public schools access to resources. The algorithms that regulate patient diagnoses and reimbursements to doctors. The impenetrable corporate bureaucracy that can drive customers in need of help up the wall or drive them to suicide. The storage, sorting and analysis of massive amounts of information have enabled the automation of decision making at an unprecedented level. Meanwhile computers have offered a model of cognition that increasingly shapes our approach to the world. The proliferation of robo-processes is the result, as editors Catherine Besteman and Hugh Gusterson observe in this rich and wide ranging volume which features contributions from a distinguished cast of scholars in anthropology, communications, international studies and political science. Though automatic processes are designed to be engines of rational systems, the stories in *Life by Algorithms* reveal how they can in fact produce absurd, inflexible or even dangerous outcomes. Joining the call for algorithmic transparency, the contributors bring exceptional sensitivity to everyday sociality into their critique to better understand how the perils of modern technology affect finance, medicine, education, housing, the workplace, food production, public space and emotions, not as separate problems but as linked manifestations of a deeper defect in the fundamental ordering of our society. *The Machine Stops*. E. M. Forster's 1909 science fiction story tells the tale of a human society collapsing when the technology upon which it has become dependent fails. Think of this volume as *The Machine Starts*, a collection of unsettling ethnographic accounts of the rise of algorithmic governance. A

Peters, 2020-01-15 2017 Texas Association for Gifted and Talented Legacy Scholar Book Award 2017 National Association of Gifted Children Scholar Book of the Year Award In Excellence Gaps in Education Jonathan A Plucker and Scott J Peters shine a spotlight on excellence gaps the achievement gaps among subgroups of students performing at the highest levels of achievement Much of the focus of recent education reform has been on closing gaps in achievement between students from different racial ethnic or socioeconomic backgrounds by bringing all students up to minimum levels of proficiency Yet issues related to excellence gaps have been largely absent from discussions about how to improve our schools and communities Plucker and Peters argue that these significant gaps reflect the existence of a persistent talent underclass in the United States among African American Hispanic Native American and poor students resulting in an incalculable loss of potential among our fastest growing populations Drawing on the latest research and a wide range of national and international data the authors outline the scope of the problem and make the case that excellence gaps should be targeted for elimination They identify promising interventions for talent development already underway in schools and provide a detailed review of potential strategies including universal screening flexible grouping targeted programs and psychosocial interventions Excellence Gaps in Education has the potential for changing our national conversation about equity and excellence and bringing fresh attention to the needs of high potential students from underrepresented backgrounds
