Sfard,2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments
to educational practice Focussing its discussion within the context of mathematics education it argues that while research
generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated
and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the
context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of
researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics
classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its
research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining
two discourses that of researchers speaking to one another and that of researchers communicating their insights to those
responsible for educational practice the book deals with the perennial question of communication between those who study
educational processes and those who are directly responsible for teacher education educational research and classroom
practices This book will be key reading for postgraduates researchers and academics in education and particularly in the
areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher
