**The Unfinished Quest** Clair T. Berube, 2008-06-01 Modern educators are currently ideologically in one of two camps those who see American education as heading in the right direction and those who fear that it has gone tragically astray For over 100 years the American educational system has been the hope of those who want to level the playing field of opportunity yet today we continue to lag behind several industrialized countries when comparing standardized science test scores Is this acceptable in the most advanced affluent country on earth Why are we not

the reigning educational system on the planet And are standardized test scores even the best way to assess the type of learning it takes to lead the world in science achievement The nature of science does not lend itself well to bubble tests yet these assessments are all we have to prove that our students are good scientists This book was born of a science teacher s frustration brought on by the standardized testing movement s reliance on high stakes tests as the sole measurement tool with which to measure achievement Science by it s very nature relies on original thinking for discovery and innovation How can this be measured by a bubble test And how do these high stakes tests affect minorities girls those with disabilities and at risk students September 11 2001 alerted us that we Americans can be less creative than our enemies an unprecedented event in American history What if changing the way we teach and assess science learning better prepares our citizens for creative preventions and solutions to world problems instead of creating citizens who have to react to world problems The nature of science begs a better way      *International Handbook of Research on Multicultural Science Education* Mary M. Atwater,2022-06-30 This handbook gathers in one volume the major research and scholarship related to multicultural science education that has developed since the field was named and established by Atwater in 1993 Culture is defined in this handbook as an integrated pattern of shared values beliefs languages worldviews behaviors artifacts knowledge and social and political relationships of a group of people in a particular place or time that the people use to understand or make meaning of their world each other and other groups of people and to transmit these to succeeding generations The research studies include both different kinds of qualitative and quantitative studies The chapters in this volume reflect differing ideas about culture and its impact on science learning and teaching in different K 14 contexts and policy issues Research findings about groups that are underrepresented in STEM in the United States and in other countries related to language issues and indigenous knowledge are included in this volume      **Mathematics and Science Across the Curriculum** ,2002
