**Health Psychology** Shelley E.

Taylor, Annette L. Stanton, 2020 When I wrote the first edition of Health Psychology over 30 years ago the task was much simpler than it is now Health psychology was a new field and was relatively small In recent decades the field has grown steadily and great research advances have been made Chief among these developments has been the use and refinement of the biopsychosocial model the study of health issues from the standpoint of biological psychological and social factors acting together Increasingly research has attempted to identify the biological pathways by which psychosocial factors such as stress may adversely affect health and potentially protective factors such as social support may buffer the impact of stress My goal in the tenth edition of this text is to convey this increasing sophistication of the field in a manner that makes it

Gary, 2024-11-25 Disability Justice in Public Health Emergencies is the first book to highlight

contributions from critical disability scholarship to the fields of public health ethics and disaster ethics It takes up such contributions with the aim of charting a path forward for clinicians bioethicists public health experts and anyone involved in emergency planning to better care for disabled people and thereby for all people in the future Across 11 chapters the contributors detail how existing public health emergency responses have failed and still fail to address the multi faceted needs of disabled people They analyze complications in the context of epidemic and pandemic disease and emphasize that vulnerabilities imposed upon disabled people track and foster patterns of racial and class domination The central claim of the volume is that the ethical and political insights of disability theory and activism provide key resources for equitable disaster planning for all The volume builds upon the existing efforts of disability communities to articulate emergency planning priorities and response measures that take into account the large body of qualitative and quantitative research on disabled

people's health needs and experiences. It is only by listening to disabled people's voices that we will all fare better in future public health emergencies. The book will be of interest to scholars and graduate students working in bioethics, disability studies, public health policy, medical sociology, and the medical humanities.
