Resilient Participation Simon Bell,Stephen Morse,2013-07-03 Stakeholder or public participation has become something of a modern mantra employed in all sorts of contexts to give people a voice There are many variants on this participation but traditionally they all share a desire to maximise involvement and provide desired outputs of a required quality as quickly and as cheaply as possible Difference tends to be reduced and compromise encouraged as the outputs or even just the appearance of participation are emphasised This book explores the large and diverse range of participatory methods currently in use examines the problems and gaps in these methods and sets out an innovative new methodology which overcomes these shortcomings Uniquely this method builds from the assumption that it is not just the outputs that

matter in participation it is also the journey Triple Task is designed to help groups explore their current situation and develop a path by which they can improve their functioning and ultimately make a positive contribution to the lives of others The book includes in depth case studies of Triple Task in action across a range of contexts and countries with particular focus on an EU project concerning indicators in policy making This new approach can be used in any context and with any sort of group to help them produce more informative outputs in which a deep reflection of how the group works is allied to an analysis of how problems can be solved

Social Interaction Systems Robert Bales, 2017-09-08 Social Interaction Systems is the culmination of a half century of work in the field of social psychology by Robert Freed Bales a pioneer at the Department

of Social Relations at Harvard University Led by Talcott Parsons Gordon W Allport Henry A Murray and Clyde M Kluckhohn the Harvard Project was intended to establish an integrative framework for social psychology one based on the interaction process augmented by value content analysis Bales sees this approach as a personal involvement that goes far beyond the classical experimental approach to the study of groups Bales developed SYMLOG which stands for systematic multiple level observation of groups The SYMLOG Consulting Group approach was worldwide as well as interactive It created a data bank that made possible a search for general laws of human interaction far beyond anything thus far known In his daring search for universal features Bales redefines the fundamental boundaries of the field and in so doing establishes criteria for the behavior and values of leaders and followers Bales offers a new field theory an appreciation of the multiple contexts in which people live Bales does not aim to eradicate differences but to understand them In this sense the values inherent in any interaction situation permit the psychologist to appreciate the sources of polarization as they actually exist between conservative and liberal individualistic and authoritarian libertarian and communitarian Bales repeatedly emphasizes that the mental processes of individuals and their social interactions take place in systematic contexts which can be measured Hence they permit explanation and prediction of behavior in a more exact way than in past traditions Bales has offered a pioneering work that has the potential to move us into a new theoretical epoch no less than a new century His work holds out the promise of synthesis and support for psychologists sociologists and all who work with groups and organizations of all kinds
