Marian B. Gorzalczany, 2012-12-06 Traditional Artificial Intelligence AI systems adopted symbolic processing as their main paradigm Symbolic AI systems have proved effective in handling problems characterized by exact and complete knowledge representation Unfortunately these systems have very little power in dealing with imprecise uncertain and incomplete data and information which significantly contribute to the description of many real world problems both physical systems and processes as well as mechanisms of decision making Moreover there are many situations where the expert domain knowledge the basis for many symbolic AI systems is not sufficient for the design of intelligent systems due to incompleteness of the existing knowledge problems caused by different biases of human experts difficulties in forming rules etc In general problem knowledge for solving a given problem can consist of an explicit knowledge e.g heuristic rules provided by a domain an implicit hidden knowledge buried in past experience expert and numerical data A study of huge amounts of these data collected in databases and the synthesizing of the knowledge encoded in them also referred to as knowledge discovery in data or data mining can significantly improve the performance of the intelligent systems designed

Development of a Fully Integrated "Sample-In-Answer-Out" System for Automatic Genetic Analysis Bin Zhuang, 2017-07-20 This thesis reports on the development of a fully integrated and automated microsystem consisting of low cost disposable plastic chips for DNA extraction and PCR amplification combined with a reusable glass capillary array electrophoresis chip which can be employed in a modular based format for genetic analysis In the thesis DNA extraction is performed by adopting a filter paper based method followed by an in situ PCR carried out directly in the same reaction chamber of the chip without elution PCR products are then co injected with sizing standards into separation channels for detection using a novel injection electrode The entire process is automatically carried out by a custom made compact control and detection instrument The author thoroughly tests the system s performance and reliability by conducting rapid genetic
