order the moral dimensions of each world order model and wider issues of meaning and interpretation generated by humanity's attempt to live in a meaningful world and to find the logos of the beings and things in the world. The aim of this book is to propose a unified theory of world order, i.e. a theory that combines philosophy, theology, and political theory. In this context, the author provides a thought-provoking re-interpretation of classical philosophy, placing particular emphasis on Platonism, an in-depth inquiry into medieval philosophy and spirituality, placing particular emphasis on the cultural differences between the Greek East and the Latino-Frankish West, and an intellectually challenging review and evaluation of modern Western philosophy, including Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, Rousseau, Kant, Hegel, Kierkegaard, Husserl, and Heidegger, and of Nietzsche's and the postmodernists' revolt against modernity. He then elucidates the philosophical foundations and pedigree of each of the three basic political theories of modernity, i.e. Liberalism, Communism, and Fascism, and he studies the basic theoretical debates in International Relations, Geopolitics, and Neopolitics. Finally, Laos proposes a new fourth political theory, which he calls metaphysical republicanism.

Arguments and Reason-Giving Matthew W. McKeon, 2024. Arguments figure in our everyday practices of giving reasons. For example, we use arguments to advance reasons to explain why we believe or did something, to justify our beliefs or actions, to persuade others to do or to believe something, and to advance reasons to worry or to fear that something is true. This book is about our uses of arguments to advance their premises as reasons for believing their conclusions, i.e. as reasons for believing that their conclusions are true. What exactly is involved when you successfully use an argument to advance the

premises as reasons for believing the conclusion Philosopher Matthew W McKeon suggests there is more involved than one might think

Presumptions and Burdens of Proof Hans Vilhelm Hansen,Fred J. Kauffeld,James B. Freeman,Lilian Bermejo-Luque,2019-05-28 An anthology of the most important historical sources classical and modern on the subjects of presumptions and burdens of proof In the last fifty years the study of argumentation has become one of the most exciting intellectual crossroads in the modern academy Two of the most central concepts of argumentation theory are presumptions and burdens of proof Their functions have been explicitly recognized in legal theory since the middle ages but their pervasive presence in all forms of argumentation and in inquiries beyond the law including politics science religion philosophy and interpersonal communication have been the object of study since the nineteenth century However the documents and essays central to any discussion of presumptions and burdens of proof as devices of argumentation are scattered across a variety of remote sources in rhetoric law and philosophy Presumptions and Burdens of Proof An Anthology of Argumentation and the Law brings together for the first time key texts relating to the history of the theory of presumptions along with contemporary studies that identify and give insight into the issues facing students and scholars today The collection s first half contains historical sources and begins with excerpts from Aristotle s Topics and goes on to include the locus classicus chapter from Bishop Whately s crucial Elements of Rhetoric as well as later reactions to Whately s views The second half of the collection

contains contemporary essays by contributors from the fields of law philosophy rhetoric and argumentation and communication theory These essays explore contemporary understandings of presumptions and burdens of proof and their role in numerous contexts today This anthology is the definitive resource on the subject of these crucial rhetorical modes and will be a vital resource to all scholars of communication and rhetoric as well as legal scholars and practicing jurists The Wonderful Decree Travis James Campbell,2020-01-03 Unconditionally loving Sovereign over all How can God be sovereign over all things and loving towards all people while His creatures possess real freedom and responsibility for their choices Theologians have wrestled with this question for centuries But have our attempted solutions made the problem worse In Wonderful Decree Travis James Campbell suggests we cannot solve the problem by sacrificing either divine sovereignty and goodness on one hand or human responsibility on the other While considering Arminian and Molinist alternatives he concludes that the traditional Augustinian and Calvinist approach best allows these truths to remain in a healthy and biblically faithful tension Inspired by the example of Spurgeon who preferred biblical mystery over human solutions Campbell encourages readers to trust even delight in the harmony of God s love for all and sovereignty over all **Reframing the Problem of Climate Change** Klaus Hasselmann,Carlo Jaeger,Gerd Leipold,Diana Mangalagiu,Joan David Tàbara,2013-06-17 This book provides an evaluation of the science and policy debates on climate change and offers a reframing of the challenges they pose as understood by key international experts and players in the field It also gives an important and original perspective on interpreting climate action and provides compelling evidence of the weakness of arguments that frame climate policy as a win or lose situation At the same time the book goes beyond providing yet another description of climate change trends and policy processes Its goal is to make available in a series of in depth reflections and insights by key international figures representing science business finance and civil society what is really needed to link knowledge to action Different contributions convincingly show that it is time and possible to reframe the climate debate in a completely new light perhaps as a system transformative attractor for new green growth sustainable development and technological innovation Reframing the Problem of Climate Change reflects a deep belief that dealing with climate change does not have to be a zero sum game with winners and losers The contributors argue that our societies can learn to respond to the challenge it presents and avoid both human suffering and large scale destruction of ecosystems and that this does not necessarily require economic sacrifice Therefore it is vital reading for students academics and policy makers involved in the debate surrounding climate change *(Generalized) Fuzzy Matrices And Relations* Herbert Toth,2025-02-25 The book provides an overview of the main concepts and results related to fuzzy matrices and fuzzy relations using fuzzy in a general sense to mean many valued This overview along with numerous references to original contributions dispersed across various journals serves as a comprehensive guide for further exploration This volume can be viewed in two ways i as a companion to the author s previous work *Relations Concrete Abstract and Applied* published by WSPC 2020 but with a distinct emphasis on many

valued concepts or ii as a standalone volume that can be read independently which necessarily includes some repetition of material from the earlier book as preliminary or reference content Similar to the previous book this one does not present new findings but offers a self contained compilation of known results selected from the extensive research conducted over the past five decades arranged in a systematic manner The topics covered in this text have been the subject of intensive research over the last two decades yet there has been no book publication on this subject for over 15 years This book aims to bridge that gap
