**Greenwashing Sport** Toby Miller, 2017-07-06 Professional sports promote their green credentials and yet remain complicit in our global environmental crisis. Sports are responsible for significant carbon footprints through stadium construction and energy use, player and spectator travel, and media coverage. The impact of sports on climate change is further compounded by sponsorship deals with the gas and petroleum industries, imbuing those extractive corporations with a positive image by embedding them within the everyday pleasure of sport. Toby Miller argues that such activities amount to greenwashing. Scrutinizing motor racing, association football, and the Olympics, Miller weighs up their environmental policies, their rhetoric of conservation and sustainability, and their green credentials. The book concludes with the role of green citizenship and organic fan activism in promoting pro-environmental sports. This is a must-read for students and researchers in media communications, sociology, cultural studies, and environmental studies.

Entangled Life Gillian Barker, Eric Desjardins, Trevor Pearce, 2013-09-05 This volume explores the interactions between organisms and their environments and how this entanglement is a fundamental aspect of all life. It brings together the work and ideas of historians, philosophers, biologists, and social scientists, uniting a range of new perspectives, methods, and frameworks for examining and understanding the ways that organisms and environments interact. The volume is organized into three main sections: historical perspectives, contested models, and emerging frameworks. The first section explores the origins of the modern idea of organism-environment interaction in the mid-nineteenth century and its development by later psychologists and anthropologists. In the second section, a variety of controversial models, from mathematical representations of evolution to model organisms in medical research, are discussed and reframed in light of recent questions about the interplay between organisms and environment. The third section investigates several new ideas that have the potential to reshape key aspects of the biological and social sciences. Populations of organisms evolve in response to changing environments; bodies and minds depend on a wide array of circumstances for their development; cultures create complex relationships with the natural world even as they alter it irrevocably. The chapters in this volume share a commitment to unraveling the mysteries of this entangled life.
