Extensions of Logic Programming Peter Schroeder-Heister, 1991-02-12 This volume contains finalized versions of papers presented at an international workshop on extensions of logic programming held at the Seminar for Natural Language Systems at the University of Tübingen in December 1989 Several recent extensions of definite Horn clause programming especially those with a proof theoretic background have much in common One common thread is a new emphasis on hypothetical reasoning which is typically inspired by Gentzen style sequent or natural deduction systems This is not only of theoretical significance but also bears upon computational issues It was one purpose of the workshop to bring some of these recent developments together The volume covers topics such as the languages Lambda Prolog N Prolog and GCLA the relationship between logic programming and functional programming and the relationship between extensions of logic programming and automated theorem proving It contains the results of the first conference concentrating on proof theoretic approaches to logic programming

The Method of Socratic Proofs Dorota Leszczyńska-Jasion, 2025-06-13 This book contains a systematic and formal attempt to model solutions to problems such as Is it possible to prove a question Is it possible to prove something by the use of questions Do the existing paradigms in the logic of questions allow one to combine questions and proofs What are the results in this field In developing answers the book focuses on the applications of the method of Socratic proofs and goes beyond that It starts out with an overview of the leading paradigms issues problems and ready solutions in the logic of questions and places Inferential Erotetic Logic and the method of Socratic proofs against a wider background It then introduces these two methods in more detail and explains how they can be used for classical logic intuitionistic propositional logic and for basic modal logics Next the book deals with issues specific to the field of the logic of questions introducing the tools of Minimal Erotetic Semantics MiES The final chapters describe the translations between proof systems from a Socratic transformation derived in an erotetic calculus into a sequent system

Deductive Verification of Object-oriented Software Benjamin

Weiß,2014-08-18 Software systems play a central role in modern society and their correctness is often crucially important Formal specification and verification are promising approaches for ensuring correctness more rigorously than just by testing This work presents an approach for deductively verifying design by contract specifications of object oriented programs The approach is based on dynamic logic and addresses the challenges of modularity and automation using dynamic frames and predicate abstraction

Christian Logic Stephen Wuest,2024-10-25 This text is about fusing logic and moral theory and is definitely from a Christian worldview It is written on a level for AP high school or at most second year college use But the text is for Christian laypeople The goals of this book include presenting modern deductive logic modern logical notation and the twenty rules of inference These describe what modern deductive logic is However orthodox Christians must go further they must be exposed to historical moral ethical ME models And they must think carefully about how to integrate Christian morality into modern logic and use this fusion to have a sound methodology to analyze modern arguments Given the popularity of logically incoherent conspiracy theories this approach to formal logic enters through the door of what historical Christians would call roughly our shared reality Also given the abundance of partial or invalid or unsound arguments that Americans encounter the analysis of arguments in this book will heavily deal with dysfunctional arguments Putting these topics together in a synthesized way in a Christian worldview results in a product that reasons across disciplines and is perhaps politically incorrect But the author is convinced that this combination of skills is what American Christians need

Functional and Logic Programming Jeremy Gibbons,Dale Miller,2024-05-16 This book constitutes the proceedings of the 17th International Symposium on Functional and Logic Programming FLOPS 2024 held in Kumamoto Japan in May 2024 The 15 papers presented in this volume were carefully reviewed and selected from 28 submissions The scope includes all aspects of the design semantics theory applications implementations and teaching of declarative programming FLOPS specifically aims to promote cross fertilization between theory and practice and among different styles of declarative programming

The Handy Islam Answer Book John Renard,2015-01-19 A western Islamic scholar demystifies and explains one of the world's great religious traditions In an age of continued Middle East volatility religious extremists and terrorist threats the mere mention of Islam and Muslims too often provokes misunderstanding and even rancor Often overlooked are the important links between the Qur'an and the Bible Also ignored are the significant historical overlap between Islamic interpretation of history with those of Christianity and Judaism Islam is too often confusing and even opaque to those unfamiliar with it Truly a must have reference for our changing and trying times The Handy Islam Answer Book is clearly and eloquently written by John Renard Ph D a scholar of Islam with more than 40 years of research and teaching experience This user friendly guide answers nearly 800 questions and offers fun facts that cover Islamic history religious practices and Muslim cultural perspectives including When did Islam begin Why is Mecca a holy city for Muslims Do Muslims worship Muhammad What was the fate of Medieval Christian pilgrims to the Holy Land What do Muslims mean by the term Allah

What does the crescent moon and star symbol mean to Muslims What is the Muslim call to prayer Is it similar to church bells Do Muslims believe that God tests people Does Muhammad play a role in Islamic spirituality in a manner similar to Jesus role in Christianity Is jihad a legal concept for Muslims Is it true that Muhammad both preached and engaged in military campaigns Do Muslims Christians and Jews worship the same God Why do Jews Christians and Muslims all claim parts of Israel Palestine as Holy Land Why do some people such as the Taliban not want girls to get an education Does Islam require wearing face veils Is there any similarity between Muslim and Christian art Muslims are diverse and they have a vast spectrum of views about Islam and The Handy Islam Answer Book is a resource for reliable information about Islam and Muslims This helpful books also provides a historic timeline a glossary of commonly used terms a genealogy from Adam to Muhammad and beyond a calendar of major observances an extensive index and a bibliography help further exploration of one of the world s great religions

On the Logic and Learning of Language Sean A. Fulop, 2004-10-14 This book presents the author s research on automatic learning procedures for categorial grammars of natural languages The research program spans a number of intertwined disciplines including syntax semantics learnability theory logic and computer science The theoretical framework employed is an extension of categorial grammar that has come to be called multimodal or type logical grammar The first part of the book presents an expository summary of how grammatical sentences of any language can be deduced with a specially designed logical calculus that treats syntactic categories as its formulae Some such Universal Type Logic is posited to underlie the human language faculty and all linguistic variation is captured by the different systems of semantic and syntactic categories which are assigned in the lexicons of different languages The remainder of the book is devoted to the explicit formal development of computer algorithms which can learn the lexicons of type logical grammars from learning samples of annotated sentences The annotations consist of semantic terms expressed in the lambda calculus and may also include an unlabeled tree structuring over the sentence The major features of the research include the following We show how the assumption of a universal linguistic component the logic of language is not incompatible with the conviction that every language needs a different system of syntactic and semantic categories for its proper description The supposedly universal linguistic categories descending from antiquity noun verb etc are summarily discarded Languages are here modeled as consisting primarily of sentence trees labeled with semantic structures a new mathematical class of such term labeled tree languages is developed which cross cuts the well known Chomsky hierarchy and provides a formal restrictive condition on the nature of human languages The human language acquisition mechanism is postulated to be biased such that it assumes all input language samples are drawn from the above syntactically homogeneous class in this way the universal features of human languages arise not just from the innate logic of language but also from the innate biases which govern language learning This project represents the first complete explicit attempt to model the aquisition of human language since Steve Pinker s groundbreaking 1984 publication Language Learnability and Language Development

Handbook of Logic in Artificial Intelligence and Logic Programming: Volume 5: Logic Programming Dov M. Gabbay, C. J. Hogger, J. A. Statistical Relational Artificial Intelligence Luc De Raedt, Kristian Kersting, Sriraam Natarajan, David Poole, 2016-03-24 An intelligent agent interacting with the real world will encounter individual people courses test results drugs prescriptions chairs boxes etc and needs to reason about properties of these individuals and relations among them as well as cope with uncertainty Uncertainty has been studied in probability theory and graphical models and relations have been studied in logic in particular in the predicate calculus and its extensions This book

examines the foundations of combining logic and probability into what are called relational probabilistic models. It introduces representations, inference and learning techniques for probability logic and their combinations. The book focuses on two representations in detail: Markov logic networks, a relational extension of undirected graphical models, and weighted first order predicate calculus formula and Problog, a probabilistic extension of logic programs that can also be viewed as a Turing complete relational extension of Bayesian networks.

Logical Methods Greg Restall, Shawn Standefer, 2023-01-03 An accessible introduction to philosophical logic suitable for undergraduate courses and above. Rigorous yet accessible. *Logical Methods* introduces logical tools used in philosophy including proofs, models, modal logics, meta theory, two dimensional logics and quantification for philosophy students at the undergraduate level and above. The approach developed by Greg Restall and Shawn Standefer is distinct from other texts because it presents proof construction on equal footing with model building and emphasizes connections to other areas of philosophy as the tools are developed. Throughout the material draws on a broad range of examples to show readers how to develop and master tools of proofs and models for propositional, modal and predicate logic to construct and analyze arguments and to find their structure to build counterexamples to understand the broad sweep of formal logic's development in the twentieth and twenty first centuries and to grasp key concepts used again and again in philosophy. This text is essential to philosophy curricula regardless of specialization and will also find wide use in mathematics and computer science programs.

Features: An accessible introduction to proof theory for readers with no background in logic. Covers proofs, models, modal logics, meta theory, two dimensional logics, quantification and many other topics. Provides tools and techniques of particular interest to philosophers and philosophical logicians. Features short summaries of key concepts and skills at the end of each chapter. Offers chapter by chapter exercises in two categories: basic designed to reinforce important ideas and challenge designed to push students' understanding and developing skills in new directions.

Geometries Of Nature, Living Systems And Human Cognition: New Interactions Of Mathematics With Natural Sciences And Humanities Luciano Boi, 2005-11-02 The collection of papers forming this volume is intended to provide a deeper study of some mathematical and physical subjects which are at the core of recent developments in the natural and living sciences. The book explores some far reaching interfaces where mathematics, theoretical physics and natural sciences seem to interact profoundly. The main goal is to show that an accomplished movement of geometrisation has enabled the discovery of a great variety of amazing structures and behaviors in physical reality and in living matter. The diverse group of expert mathematicians, physicists and natural scientists present numerous new results and original ideas, methods and techniques. Both academic and interdisciplinary, the book investigates a number of important connections between mathematics, theoretical physics and natural sciences including biology.

Kvanvig,2018-05-12 This book is devoted to articulating the connections between the nature and value of faith and humility The goal is to understand faith and humility in a way that does not discriminate between religious and mundane contexts between sacred and secular It arises from a conviction that these two character traits are important to a flourishing life and intimately related to each other in such a way that the presence of one demands the presence of the other In particular the book defends the claim that each of these virtues provides a necessary compensating balance to the potential downside of the other virtue The result of such an inquiry if that inquiry is successful will require a re orienting of discussions surrounding faith including debates about the relationship between faith and reason **Automated Deduction - CADE-20** Robert Nieuwenhuis,2005-08-25 This volume contains the proceedings of the 20th International Conference on Automated Deduction CADE 20 It was held July 22 27 2005 in Tallinn Estonia Simple Type Theory William M. Farmer,2023-01-01 This unique textbook in contrast to a standard logic text provides the reader with a logic that actually can be used in practice to express and reason about mathematical ideas The book is an introduction to simple type theory a classical higher order version of predicate logic that extends first order logic It presents a practice oriented logic called Alonzo that is based on Alonzo Church s formulation of simple type theory known as Church s type theory Unlike traditional predicate logics Alonzo admits undefined expressions The book illustrates using Alonzo how simple

type theory is suited ideally for reasoning about mathematical structures and constructing libraries of mathematical knowledge
