80% of the atmosphere's volume living organisms need it in only small quantities presumably due to the paucity of natural ways of transforming this recalcitrant dinitrogen into reactive compounds. N shortage is commonly the most important limiting factor in crop production. The synthesis of ammonium from nitrogen and hydrogen, the Haber-Bosch (H-B) process, invented more than 100 years ago, became the holy grail of synthetic inorganic chemistry and removed the most ubiquitous limit on crop yields. H-B opened the way for the development and adoption of high yielding cultivars for monoculturing by organic and precision farming. With N over fertilization and pesticide application, monoculturing farmers could approach Nature's high biomass productivity by causing side effects. The scientific world is investigating this complexity. This eBook presents the scientific world's facing in understanding the soil-microbe-plant-animal cooperation, the millions of taxonomically, phylogenetically, and metabolically diverse above/below ground species involved in shaping the ever-changing biogeochemical process patterns, being of great significance for food production networks and yield stability. Because ecosystem management and agricultural praxis are still largely conducted in isolation, the aim of this Frontiers eBook is to gather and interconnect plant-microbe-insect interaction research of various disciplines studied with a broad spectrum of modern physical, chemical, biochemical, and molecular biological/agronomical techniques. The goal of this Research Topic was to gain a better understanding of microbe-plant-insect compositions, functioning interactions, health, fitness, and productivity.

**Farm Toxicology** William J. Meggs, Ricky L. Langley, 2025-04-08. This book provides healthcare workers practicing in rural areas with the practical knowledge necessary to diagnose and treat farm workers who develop an acute or chronic illness. In rural settings, distances and travel times may be prolonged, leading to delays in assessment and definitive treatment. Healthcare providers must be prepared to rapidly assess the ill farm worker, formulate a differential diagnosis, and initiate treatment. The volume begins by teaching the reader to formulate a comprehensive differential diagnosis of farm worker illnesses, including stings and bites, green tobacco syndrome, infections, and heat and weather-related events, as well as exposures to the numerous chemicals found on the farm. The toxicity of various farm products, such as insecticides, herbicides, rodenticides, and petroleum products, are each discussed in their own chapter, enabling the reader to rapidly obtain vital information on their mechanism, clinical signs and symptoms, and differential diagnosis. The reader will learn to utilize information on pesticide labels and safety data sheets, including proper use of personal protective equipment. Chapter authors discuss a variety of other topics, including toxic gas exposures on the farm, disease associations with chronic chemical exposures, illicit drug use, and miscellaneous conditions that a rural practitioner should be familiar with that may occur on the farm, such as heat and cold injuries, lightning strikes, allergies, and asthma. *Farm Toxicology: A Primer for Rural Healthcare Practitioners* will be an invaluable resource for rural healthcare providers, including paramedics, triage nurses, physician assistants, nurse practitioners, and physicians who need to quickly evaluate and treat ill farm workers. *Evaluation 2022*
