

TYPES OF ESTIMATION TECHNIQUES IN SOFTWARE TESTING

Program Evaluation and Review Technique (PERT)

PERT is an "activity-on-arrow" network diagram first used in the late 1950s by the U.S. Navy. It's a popular method for determining the time required to complete a project.

Use Case Points (UCP)

Work Breakdown Structure (WBS)

It works by dividing the work into smaller modules for a more accurate estimation. These modules are further divided into measurable sub-modules. They are then split up into functionalities, and so forth. As a result, you get a detailed hierarchical map of the actual effort.

Delphi Technique

The Delphi technique is a widely used project management technique. In this method, experts will come together to collaborate. They will gather insights to identify the project's potential outcome.

Experience-Based

This technique draws from the experience of the quality assurance team. This approach uses existing documents and estimates as a basis for better results.

Function Points (FP)

Using the FP technique, you can calculate the size of any project and forecast its duration. Plus, it determines the adjusted function point that equals the project size.

Percentage Distribution

All you need to do with this technique is have a team with the expertise to estimate a testing project. You can distribute the entire scope of testing tasks across 100% of the total testing time.

Agile Estimation
