International Catalogue of Scientific Literature ,1902 *International Catalogue of Scientific Literature, 1901-1914* ,1904 *Mathematical Reviews* ,2007 Abraham De Moivre David R. Bellhouse,2011-10-19 Extensively researched this book traces the life and work of Abraham De Moivre as well as the state of probability and statistics in eighteenth century Britain It is the first extensive biography of De Moivre and is based on recently discovered material and translations including some of De Moivre s letters The book begins with discussions on De Moivre s early life in France and his initial work in pure mathematics with some excursions into celestial mechanics It then describes his fundamental contributions to probability theory and applications including those in finance and actuarial science The author explores how De Moivre s wide network of personal and professional connections often motivated his research The book also covers De Moivre s contemporaries and his impact on the field Written in a clear approachable style this biography will appeal to historians and practitioners of the art of probability and statistics in a wide range of applications including finance and actuarial science **The Structure of Time** W. H. Newton-Smith,2018-10-10 Originally published in 1980 What is time How is its structure determined The enduring controversy about the nature and structure of time has traditionally been a diametrical argument between those who see time as a container into which events are placed and those for whom time cannot exist without events This controversy between the absolutist and the relativist theories of time is a central theme of this study The author s impressive arguments provide grounds for rejecting both these theories firstly by establishing that empty time is possible and secondly by showing through a discussion of the structure of time which involves considering whether time might be cyclical branching beginning or non beginning that the absolutist theory of time is untenable This book then advances two new theories and succeeds in shifting the traditional debate about time to a consideration of time as a theoretical structure and as a theoretical framework □□□□ George E. Andrews,2004 **International Catalogue of Scientific Literature [1901-14].** ,1902 **Recent Advances in Computational and Applied Mathematics** Theodore E. Simos,2010-10-10 This multi author contributed proceedings volume contains recent advances in several areas of Computational and Applied Mathematics Each review is written by well known leaders of Computational and Applied Mathematics The book gives a comprehensive account of a variety of topics including Efficient Global Methods for the Numerical Solution of Nonlinear Systems of Two point Boundary Value Problems Advances on collocation based numerical methods for Ordinary Differential Equations and Volterra Integral Equations Basic Methods for Computing Special Functions Melt Spinning Optimal Control and Stability Issues Brief survey on the CP methods for the Schr dinger equation Symplectic Partitioned Runge Kutta methods for the numerical integration of periodic and oscillatory problems Recent Advances in Computational and Applied Mathematics is aimed at advanced undergraduates and researchers who are working in these fast moving fields *Quarterly of Applied Mathematics* ,1952 Constructing Grounded Theory Kathy Charmaz,2006-01-13

Grounded theory is a highly influential way of working with qualitative data and Kathy Charmaz is a major player both innovative and fluent. This book is a model student text, lively, carefully argued and full of vivid illustrations. Beginning students and professional researchers will find it to be required reading. David Silverman, Professor Emeritus, Sociology Department, Goldsmiths College and Visiting Professor, Management Department, King's College, University of London. Kathy Charmaz is one of the world's leading theorists and exponents of grounded theory. In this important and essential new textbook, she introduces the reader to the craft of using grounded theory in social research and provides a clear step-by-step guide for those new to the field. Using worked examples throughout, this book also maps out an alternative vision of grounded theory to that put forward by its founding thinkers, Glaser and Strauss. To Charmaz, grounded theory must move on from its positivist origins and must incorporate many of the methods and questions posed by constructivists over the past twenty years to become a more nuanced and reflexive practice. Essential reading for students, new researchers and seasoned social scientists alike, this book is one of those rare things: a textbook that is both accessible to those new to the field but also one that has important things to say about the nature of social enquiry itself.
