International Strategy of Emerging Market Firms Andrei Panibratov, 2017-03-16

Emerging economies are expected to be in the driver's seat of the global economy in the medium and long term. Large multinational corporations will account for much of this activity. In this textbook, Andrei Panibratov explains how emerging market firms accumulate and exploit market knowledge to develop competitive advantages whilst operating globally. Chapters dedicated to the key emerging economies, Brazil, Russia, India, and China (BRIC), are enhanced by detailed case studies of large firms' activities. The book is divided into four parts focusing on the following: An outline of the relevant terminology and the context of the international strategy of emerging market firms providing an introductory foundation for the whole book; A guide to the evolution of perspectives regarding international strategy designed to illustrate the changes and trends in the recent academic research on internationalization; A country-by-country illustration of the internationalization of BRIC economies and firms providing an overall picture of each country's global integration, outward investments, and strategies; The concepts and practices behind the strategies employed by different firms. Written by an established international business scholar, this book is essential reading for students of international strategy who wish to understand the importance of the emerging economies.

The Economics of Oil S.W. Carmalt, 2016-12-26. This book examines the ways that oil economics will impact the rapidly changing global economy and the oil industry itself over the coming decades. The predictions of peak oil were both right and wrong. Oil production has been constrained in relation to demand for the past decade with a resulting four-fold increase in the oil price slowing the entire global economy. High oil prices have encouraged a small increase in oil production and mostly from the short-lived fracking revolution but enough to be able to claim that peak oil was a false prophecy. The high oil price has also engendered massive exploration investments but remaining hydrocarbon stocks generally offer poor returns in energy, the energy return on investment or EROI, and financial terms and no longer replace the reserves being produced. As a result, the economically powerful oil companies are under great pressure, both financially and politically, as oil remains the backbone of the global economy. Development scenarios and political pressure for growth as a means of solving economic woes both require more net energy, which is the amount of energy available after energy and thus financial inputs required for new sources to come on line are deducted. In today's economy, more energy usually means more oil. Although a barrel of oil from any source may look the same, tight oil and oil from tar sands require much higher prices to be profitable for the producer; these expensive sources have very different economic implications from the conventional oil supplies that underpinned economic growth for most of the 20th century. The role of oil in the global economy is not easily changed. Since currently installed infrastructure assumes oil, a change implies more than just substitution of an energy source. The speed with which such basic structural changes can be made is also constrained and ultimately themselves dependent on fossil fuel inputs. It remains unclear how this scenario will evolve and that uncertainty adds additional economic pressure to the investment decisions that must be made. Drill baby drill and new pipeline projects may be attractive politically but projections of economic and associated oil production growth based on past performance are
