

# Mutation & Genetic Disorders

JOHN PAUL E. SANTOS  
University Science High School

## Mutations

A mutation may be defined as a permanent change in the DNA.

Mutations that affect the germ cells are transmittable to the progeny and may give rise to inherited diseases.

Mutations that arise in somatic cells are important in the genesis of cancers and some congenital malformations.

Mutations may be classified into three categories:

**Genome mutations** — involve loss or gain of whole chromosomes (giving rise to monosomy or trisomy)
