hundreds of years and drawn attention from media and scholars seeking to understand the role that conflicts of interests and other psychological processes play. However, commonly proposed solutions to biased decision making such as transparency, disclosing conflicts, or exclusion, avoiding conflicts, do not directly solve the underlying problem of bias and may have unintended consequences. Robertson and Kesselheim bring together a renowned group of interdisciplinary scholars to consider another way to reduce the risk of biased decision making: blinding. What are the advantages and limitations of blinding? How can we quantify the biases in unblinded research? Can we develop new ways to blind decision makers? What are the ethical problems with withholding information from decision makers in the course of blinding? How can blinding be adapted to legal and scientific procedures and in institutions not previously open to this approach? Fundamentally, these sorts of questions about who needs to know what open new doors of inquiry for the design of scientific research studies, regulatory institutions, and courts. The volume surveys the theory, practice, and future of blinding, drawing upon leading authors with a diverse range of methodologies and areas of expertise, including forensic sciences, medicine, law, philosophy, economics, psychology, sociology, and statistics. Introduces readers to the primary policy issue this book seeks to address: biased decision making. Provides a focus on blinding as a solution to bias, which has applicability in many domains. Traces the development of blinding as a solution to bias and explores the different ways blinding has been employed. Includes case studies to explore particular uses of blinding for statisticians, radiologists, and fingerprint examiners, and whether the jurors and judges who rely upon them will value and understand blinding.

Harry Hollien,2013-06-29 There are many reasons for writing a book this one was conceived and developed mainly for two First a new area has emerged from within the forensic sciences that of forensic phonetics As with all new specialties it is necessary to define it identify its boundaries justify its importance and compile a list of the elements it encompasses This book attempts to outline these several relationships Second over the past decade I have become fascinated with forensics in general and the rapidly expanded subarea of forensic phonetics in particular Admittedly the latter field is one that is not as yet sufficiently appreciated and much more needs to be known about its nature and extent Yet I have found it to be a most enjoyable area of study and my attempts to describe its domains were quite informative It was especially interesting to struggle with the interfaces between forensic phonetics and related fields and discover how they overlap Only a few comments will be made about the book's contents here in the preface For one thing they are described in some detail in the first chapter Bridge Safety, Maintenance, Management, Life-Cycle, Resilience and Sustainability Joan Ramon Casas,Dan M. Frangopol,Jose Turmo,2022-06-27 Bridge Safety Maintenance Management Life Cycle Resilience and Sustainability contains lectures and papers presented at the Eleventh International Conference on Bridge Maintenance Safety and Management IABMAS 2022 Barcelona Spain 11-15 July 2022 This e-book contains the full papers of 322 contributions presented at IABMAS 2022 including the T.Y. Lin Lecture 4 Keynote Lectures and 317 technical papers from 36 countries all around the world The contributions deal with the state of the art as well as emerging concepts and innovative applications related to the main aspects of safety maintenance management life cycle resilience sustainability and technological innovations of bridges Major topics include advanced bridge design construction and maintenance approaches safety reliability and risk evaluation life cycle management life cycle resilience sustainability standardization analytical models bridge management systems service life prediction structural health monitoring non-destructive testing and field testing robustness and redundancy durability enhancement repair and rehabilitation fatigue and corrosion extreme loads needs of bridge owners whole life costing and investment for the future financial planning and application of information and computer technology big data analysis and artificial intelligence for bridges among others This volume provides both an up-to-date overview of the field of bridge engineering and significant contributions to the process of making more rational decisions on bridge safety maintenance management life cycle resilience and sustainability of bridges for the purpose of enhancing the welfare of society The volume serves as a valuable reference to all concerned with and/or involved in bridge structure and infrastructure systems including students researchers and practitioners from all areas of bridge engineering

A Survey of the Forensic Sciences Randall Skelton, 2011 Exploring the broad spectrum of the forensic sciences practiced both inside and outside of a crime lab this text investigates forensic sciences that are used both in criminal and civil contexts along with non traditional and new applications such as occupational fraud wildlife protection and homeland security The approach is unifying in that it seeks to explain the underlying theoretical and practical concepts that unite all forensic science as well as the individual challenges of each of the forensic sciences The scientific concepts that underly the forensic sciences are explained in a manner that is understandable by readers without a science background
