ICCSA 2015 Osvaldo Gervasi,Beniamino Murgante,Sanjay Misra,Marina L. Gavrilova,Ana Maria Alves Coutinho Rocha,Carmelo Torre,David Taniar,Bernady O. Aduhan,2015-06-20 The five volume set LNCS 9155 9159 constitutes the refereed proceedings of the 15th International Conference on Computational Science and Its Applications ICCSA 2015 held in Banff AB Canada in June 2015 The 232 revised full papers presented in 22 workshops and a general track were carefully reviewed and selected from 780 initial submissions for inclusion in this volume They cover various areas in computational science ranging from computational science technologies to specific areas of computational science such as computational geometry and security *Computational Materials Science* Kaoru Ohno,Keivan Esfarjani,Yoshiyuki Kawazoe,2012-12-06 There has been much progress in the computational approaches in the field of materials science during the past two decades In particular computer simulation has become a very important tool in this field since it is a bridge between theory which is often limited by its oversimplified models and experiment which is limited by the physical parameters Computer simulation on the other hand can partially fulfill both of these paradigms since it is based on theories and is in fact performing experiment but under any arbitrary even unphysical conditions This progress is indebted to advances in computational physics and chemistry Ab initio methods are being used widely and frequently in order to determine the electronic and or atomic structures of different materials The ultimate goal is to be able to predict various properties of a material just from its atomic coordinates and also in some cases to even predict the stable atomic positions of a given material However at present the applications of ab initio methods are severely limited with respect to the number of particles and the time scale of dynamical simulation This is one extreme of the methodology based on very accurate electronic level calculations

tools for solving complex problems For this reason Computational Science though originating from the need to solve the most challenging problems in science and engineering computational science is the key player in the fight to gain fundamental advances in astronomy biology chemistry environmental science physics and several other scientific and engineering disciplines is increasingly turning its attention to all fields of human activity In all activities in fact intensive computation information handling knowledge synthesis the use of ad hoc devices etc increasingly need to be exploited and coordinated regardless of the location of both the users and the various and heterogeneous computing platforms As a result the key to understanding the explosive growth of this discipline lies in two adjectives that more and more appropriately refer to Computational Science and its applications interoperable and ubiquitous Numerous examples of ubiquitous and interoperable tools and applications are given in the present four LNCS volumes containing the contributions delivered at the 2004 International Conference on Computational Science and its Applications ICCSA 2004 held in Assisi Italy May 14-17 2004 **London, Edinburgh and Dublin Philosophical Magazine and Journal of Science** ,1911 *The London, Edinburgh and Dublin Philosophical Magazine and Journal of Science* ,1922 **Metadata and Semantics Research** Emmanouel Garoufallou, Richard J.
