Department of State, 1996     **Evolution of the Human Diet** Peter S. Ungar, 2007 We are interested in the evolution of hominin diets for several reasons One is the fundamental concern over our present day eating habits and the consequences of our societal choices such as obesity prevalent in some cultures and starvation in others Another is that humans have learned to feed themselves in extremely varied environments and these adaptations which are fundamentally different from those of our closest biological relatives have to have had historical roots of varying depth The third and the reason why most paleoanthropologists are interested in this question is that a species trophic level and feeding adaptations can have a strong effect on body size locomotion life history strategies geographic range habitat choice and social behavior Diet is key to understanding the ecology and evolution of our distant ancestors and their kin the early hominins A study of the range of foods eaten by our progenitors underscores just how unhealthy many of our diets are today This volume brings together authorities from disparate fields to offer new insights into the diets of our ancestors Paleontologists archaeologists primatologists nutritionists and other researchers all contribute pieces to the puzzle This volume has at its core four main

sections Reconstructed diets based on hominin fossils tooth size shape structure wear and chemistry mandibular biomechanics Archaeological evidence of subsistence stone tools and modified bones Models of early hominin diets based on the diets of living primates both human and non human paleoecology and energetics Nutritional analyses and their implications for evolutionary medicine New techniques for glean information from fossil teeth bones and stone tools new theories stemming from studies of paleoecology and new models coming from analogy with modern humans and other primates all contribute to our understanding When these approaches are brought together they offer an impressive glimpse into the lives of our distant ancestors The contributions in this volume explore the frontiers of our knowledge in each of these disciplines as they address the knowns the unknowns and the unknowables of the evolution of hominin diets

**The Anthropology of Human and Planetary Health** Merrill Singer, 2025-03-19 This text introduces undergraduate and graduate students in health or environment related classes to the mounting crisis of syndemics through the lens of planetary health The concept of syndemics developed by the author and now in wide use across multiple health related disciplines focuses attention on the adverse synergistic interaction of two or more diseases or other health conditions promoted or facilitated by social and or environmental conditions The planetary health framework is an emerging holistic medical rethinking of our understanding of health It seeks to identify the safe environmental limits within which humanity and other species can flourish on our increasingly imperiled planet This book offers useful conceptual tools and frameworks for developing a comprehensive understanding of approaches needed to address the health risks of our changing world The unique coverage of this book is its careful examination of ecosyndemics around the world in light of the growing recognition that on a heavily disrupted planet a narrow focus on human health is inadequate Under these circumstances a comprehensive planetary health framework is needed This approach seriously considers the interconnected nature of human health animal and plant health and the health of the world's ecosystems Highly descriptive with numerous cases of the planetary health crisis the textbook is written in a student friendly and accessible way and is an important resource for coursework across environment and health related subjects
