

GEM-TRANSLP

Low Profile Window / Door Transmitter

INSTALLATION INSTRUCTIONS

WI1667A.02 4/08

GENERAL DESCRIPTION

Fig. 1. GEM-TRANSLP Component Parts

Fig. 2. Opening the case

Fig. 3. Install battery under gold contacts

The GEM-TRANSLP is a low profile window/door transmitter designed for use in Napco GEM-series wireless systems. When used with the supplied magnet, the transmitter functions as a window/door sensor. However, plug-in wires are provided for normally-closed external contacts so that one or two additional devices may be used in conjunction with (or instead of) the internal reed switch. A jumper is provided allowing optional use of normally-closed external contact(s) and/or internal reed switch. The GEM-TRANSLP is powered by a 3-volt lithium battery (Energizer CR2032 or Duracell DL2032), that powers the transmitter for up to 5 years. When battery voltage drops below normal, a low-battery report will be sent to the receiver.

INSTALLATION

Notes: The transmitter and magnet may be mounted in any position with no degradation in performance. Thus, if a left-handed reed switch is required, the unit may be mounted upside down. However, for reference purposes in this text, the transmitter will be considered oriented with the reed switch at the top, as shown in Fig. 1. The PC board snaps into the transmitter front cover in only one direction; a raised alignment mark on the transmitter front cover indicates the location of the reed switch on the PC board. There is also an alignment mark on the magnet mounting plate.

1. **Open the case.** Remove the GEM-TRANSLP transmitter cover from its mounting plate by inserting a small screwdriver into either slot; twist while applying upward pressure. See Fig. 2.
2. **Insert the battery.** Observe battery polarity. Insert battery under the two gold contacts with the positive (+) terminal towards you (facing up). See Fig. 3. Do not insert backwards.
3. **Identify PC Board parts.** Note location of reed switch in Fig. 1.
4. **Select transmitter location.** Avoid mounting the transmitter near the floor. Low level mounting can reduce transmission range and may subject the transmitter to damage.
5. **Install magnet.** Insert a small screwdriver into either retaining tab in rear cover; push in and twist to separate. Insert magnet

inside mounting plate and replace rear cover. If using external contacts, skip to Step 7.

6. **Install mounting plates.** Use #6 flat-head screws to secure, observing reed switch alignment mark. Mount magnet housing within 5/8" of the transmitter cover. For internal contacts, skip to Step 9.
7. **(For external contacts only).** Install contact or sensor and transmitter mounting plate. Mount the contact or sensor as described in its instructions. For recessed wiring, carefully drill an access hole for the wires.
8. **(For external contacts only).** Insert wire plug into receptacle on PC board (curl wires inside case to avoid pinching wires); connect two wires to an external sensor having normally-closed contacts (or a normally-closed loop). Set Jumper J1 to "LOOP".
9. **Complete transmitter setup.** If internal reed switch is used, set Jumper J1 to "MAG". If both internal reed switch and external contacts are used, remove Jumper J1 (see table below).
10. **Close the transmitter case.** Close the case by engaging the retaining tabs at either end, then snapping the front cover to the mounting plate. Be careful not to pinch wire harness (if used).
11. **Program the panel.** Each transmitter has a unique factory-programmed ID code that distinguishes itself to the receiver. Enter (a) the zone number to which the transmitter will be mapped; (b) the 6-digit ID code with checksum digit; and (c) the wireless point number. See control-panel instructions for entering this ID code and checksum digit into the panel; be sure to enter all numbers and/or letters, including leading zeros, if any. **Note:** Program for "point 1" for all wiring options. **Note:** In UL burglary installations, program the burglary alarm output for all protective devices.

WIRING OPTIONS

The GEM-TRANSLP may be wired in any of the following configurations. Refer to the following table:

WIRING OPTIONS			
OPTION	JP1 SETTING	FUNCTION	DIAGRAM
1.		"LOOP": External contact enabled for point 1; magnetic internal contact (reed switch) disabled.	
2.		JUMPER REMOVED: External contact enabled for point 1 and magnetic internal contact (reed switch) enabled for point 1.	
3.		"MAG": Magnetic internal contact enabled for point 1; external contact disabled.	

Notes:

1. Caution: Changes or Modifications not approved by NAPCO may void the user's authority to operate the equipment.
2. This device may not cause interference.
3. This device must accept any interference, including interference that may cause undesired operation of the device.

Note: For a replacement wire harness, order part # W978.
