

Solving Quadratic Equations Graphically

Solving quadratic equations graphically is a useful way to find estimated solutions or roots for quadratic equations or functions.

 **Example** Solve $x^2 = 6$ graphically.

Draw the graphs of $y = x^2$ and $y = 6$

The solutions to the quadratic equation are the x -coordinates of the points of intersection.

Solutions to 1dp are: $x = -2.5, x = 2.5$

Quadratic Equations and Functions Workbook Norman Balason, 2021-06-19 The QUADRATIC EQUATIONS AND FUNCTIONS WORKBOOK is a resource that Algebra 2 students can use to practice solving quadratic equations writing quadratic equations graphing quadratic functions writing quadratic functions and solving word problems that involve quadratic equations and functions There are nine sections in this workbook Example problems with step by step solutions precede each type of problem for sections one through nine Students should study these examples before starting the problems This workbook also contains the step by step solutions for all problems Section 1 begins with problems for students to use square roots to solve quadratic equations in simplest terms The denominator for answers is rationalized In Section 2 students solve quadratic equations by factoring and by using the Zero Product Property Section 3 includes problems where students solve quadratic equations by completing the square This workbook contains the derivation of the Quadratic Formula In Section 4 students use the Quadratic Formula to solve quadratic equations This workbook includes the derivation of the sum and product of roots for a quadratic equation in standard form Section 5 is where students write quadratic equations given their roots Students can use the Zero Product Property or the sum and product of its roots to do these problems In Section 6 students explain why the graph of the quadratic function which is called a Parabola will open upward or downward Then they determine if the graph will have a minimum or a maximum Section 7 is where students graph quadratic functions that are in standard factored and vertex form In Section 8 students use the coordinates for points on the graph of a quadratic function to write the quadratic function in factored vertex and standard form Section 9 is where students solve word problems that involve quadratic equations and quadratic functions Finally there are step by step solutions for all problems

Trajectory for Intermediate Algebra Students Transitioning from Solving Linear Equations to Factorable
Quadratic Equations Silvia Anel Madrid Jaramillo, 2021 Research on learning quadratic equations reports students
difficulties with procedural fluency and conceptual understanding of standard methods for solving such equations There is
little research on how to support students mathematical development for factorable quadratic equations without using the
concept of function and function notation I investigated how students may develop connections between essential concepts
for solving factorable quadratic equations starting from their current conception of solving linear equations To achieve this I
conducted a design research study Based on the pilot s data analysis I proposed key developmental understandings KDUs M
A Simon s construct for students learning to solve factorable quadratic equations These KDUs informed the two subsequent
iterative cycles through which I developed a hypothetical learning trajectory HLT for supporting students understanding of
this topic In each cycle I prepared a HLT including goals mathematical tasks and hypotheses conducted individual task based
interviews and used qualitative methods to analyze participants engagement with and reasoning during the tasks I
interviewed 12 university students enrolled in an intermediate algebra course The data analysis was based on comparing the
anticipated and observed learning trajectories This study contributes a HLT and an explanatory framework for supporting
students in developing a richer understanding of solving factorable quadratic equations I incorporated two perspectives of
solutions to a linear or quadratic equation symbolically as numbers that satisfy an equation e g $ax^2 + bx + c = 0$ and graphically as
the x coordinate s of the x intercept s of the corresponding graph e g $y = ax^2 + bx + c$ The instructional tasks in this trajectory offer
students opportunities for subtle but crucial conceptual transitions as they engage their prior knowledge of linear equations
develop an intuitive understanding of why the method of factoring works understand how many solutions a linear or

quadratic equation may have notice the algebraic structure of a factored equation and understand how the zero product property applies to solving factorable quadratic equations The data analysis shows that the proposed HLT is viable The account of how participants engaged with the tasks and interacted with the researcher illustrates how teachers may probe and guide students towards reflecting on their mathematical activity and understanding of this topic *Education 4.0 Knowledge. Peter Chew Method For Quadratic Equation [2nd Edition]* Peter Chew,2023-03-29 The Peter Chew Method for Quadratic Equations is a simple and efficient approach for solving quadratic equations problem Its objective is to make it easier for the upcoming generation to solve quadratic equations including higher order function problems that cannot be solved by current methods The French mathematician Veda established the relationship between the equation root and the coefficient in 1615 Veda s theorem states that if and are two roots of the quadratic equation $ax^2 + bx + c = 0$ and $a \neq 0$ Then the sum of the two roots b/a the product of the two roots c/a The current method for solving quadratic equations involves finding the values of and using Veda s theorem and then converting the problem given into the and forms and then substituting the values of and to the problem given obtain the answer However this method is inadequate for solving higher order function quadratic equations since it is difficult to convert them into and forms With the Peter Chew method we can solve higher order function quadratic equations without the need to convert them into and forms Additionally this approach is applicable to quadratic equations with complex roots and complex coefficients The Peter Chew method involves finding the roots of the quadratic equation denoting them as and and then substituting these values to the problem given to find the answer
