Caution

(Failure to observe the following items may cause serious consequences or damage to the objects)

- Dealers must explain in details the operations to their customers according to this manual.
- Wireless remote controller and parts are packed in the packing box supplied with the indoor unit.
- Before installing, check if the power supply and circuitry are normal and make sure the voltage is within $\pm 10\%$ of the voltage rating.
- The distance of  in the installation diagram is to ensure space for the air conditioner's performance. For convenience of service and maintenance in the future, install the air conditioner in the place with sufficient space in the vicinity.
- Care should be taken in cutting, extension and bending of the refrigerant piping and not to break the pipes. As this air conditioner uses new recyclable refrigerant, "R410A" be sure to follow three principles - keeping the refrigeration system dry, clean, and air tight, when installing the refrigerant piping.

Warning

(Failure to observe the following items may cause injury or death)

- Installation of air conditioner and electrical wiring must be handled by authorized installer only. do not attempt to handle them by yourselves (Handling charges are additional.)
- Before installing, read the installation instructions thoroughly and correctly.
- Use only those specified accessories when installing. otherwise, it may cause the unit body to fall, water leakage, current leakage and fire, etc.
- When discharging, refrigerant is required during installation, be sure to use an air vent and air breather, as refrigerant will produce toxic gas once it mixes with hot air.
- When performing wiring work, be sure to follow the electrical codes and installation instructions, and also be sure to use the power loops exclusively for the air conditioner.
- When installing or moving the units, the refrigeration system (piping) must not mix with refrigerant R22 or air, except refrigerant R410A. If air is mixed in, the system capacity will reduce, causing abnormal high pressure in the refrigeration system that may lead to copper tube breaking and failure to occur.

Syan, U. Menon, 2012-12-06 **BACKGROUND** There is an increasing awareness that time to market is the key competitive issue in the manufacturing industry today. The global markets are demanding products that are well designed, are of high quality and are at low prices with ever decreasing lead times. Hence manufacturers are forced to utilize the best methods of technology with efficient control and management accompanied by suitably enabling organizational structures. Concurrent engineering (CE) is widely seen to be the methodology that can help satisfy these strenuous demands and keep the profitability and viability of product developers, manufacturers and suppliers high. There have been many reported successes of CE in practice. Rover was able to launch Land Rover Discovery in 18 months as compared with 48-63 months for similar products in Europe. Because of its early introduction to the market, it became the best selling product in its class. AT&T report part counts down to one ninth of their previous levels and quality one hundred times in surface defects for VLSI very improvements of large scale integration circuits as a result of using the CE approach. **WHO SHOULD READ THIS TEXT** This book will aim to provide a sound basis for the very diverse subject known as concurrent engineering. Concurrent engineering is recognized by an increasingly large proportion of the manufacturing industry as a necessity in order to compete in today's markets. This recognition has created the demand for information awareness and training in good concurrent engineering practice **EVALUATION OF SHIPBUILDING CAD/CAM SYSTEMS (PHASE I)**, 1996 Integrated Product, Process and Enterprise Design Ben Wang, 1997-08-31 The need exists in the private sector and government manufacturing sites to reduce product development time, production lead times, inventory and non value added activities. At the same time there is increased pressure to improve manufacturing process yields, production efficiency and resource utilization. Much of the technology required to meet these needs already exists but an integrated structure that can demonstrate the potential for the technology in a concurrent engineering context does not. This book provides a road map for building the integrated technology environment to evaluate existing products, manufacturing processes and system design tools. This book details innovative approaches that will significantly improve design, manufacturing technology development and deployment capabilities for civilian and defense applications. These

approaches are integrated product process and system design IPPSD initiatives which will greatly enhance the manufacturing competitiveness of the economy These approaches involve the use of simulation modeling tools and computerized virtual workstations in conjunction with a design environment which allows a diverse group of researchers manufacturers and suppliers to work within a comprehensive network of shared knowledge The IPPSD infrastructure consists of virtual workstations servers and a suite of simulation quantitative computational analytical experimental and qualitative tools Such an IPPSD infrastructure will permit effective and efficient predictions of complete product design manufacturing process design and customer satisfaction
