Creating New Virtual Copies

Prior to creating a virtual copies, the following restrictions should be noted:

- Creating a virtual copy at the VM level requires available space on the datastore where the VMDK file resides.
- Datastore creation from NFS drives is not supported from virtual copy operations.
- Recovery Manager for VMware vSphere requires VMFS snapshots. However, taking a VMFS snapshot of a VM participating in disk sharing, such as Microsoft MSCS, is not supported (this is a VMFS limitation).

NOTE: Virtual copy space must be available on the HP 3PAR Virtual Volume. In order to create a virtual copy on an HP 3PAR base volume, the volume itself must have had virtual copy space allocated during its creation.

To create a new virtual copy on the VM or datastore, perform the following:

1. Follow the instructions in “Viewing Virtual Copy Information” (page 60).
2. Click the **Virtual Copies** tab.
3. Click **Create**. You are then asked to supply the name for the virtual copy set.

NOTE: If you do not wish to name the virtual copy set, click **OK**. The created virtual copy is identified by a date and time stamp.

4. (Optional) You can either accept the default name based on the time when the virtual copy is created, or you can enter a name of your choosing. The virtual copy name cannot exceed 32 characters.
5. When creating the virtual copy, you have the choice of changing the **Ensure Application Consistency** option (set by default) to specify whether or not the newly created virtual copy
