The formulation of many practical problems naturally involves constraints on the variables entering the mathematical model of a real life situation to be analyzed It is of great interest to find the possible scenarios satisfying all constraints and if there are many of them either to find the best solution or to obtain a compact explicit representation of the whole feasible set The 2nd Workshop on Global Constrained Optimization and Constraint Satisfaction COCOS 2003 which took place during November 18-21 2003 in Lugano Switzerland was dedicated to theoretical algorithmic and application oriented advances in answering these questions Here global optimization refers to finding the absolutely best feasible point while constraint satisfaction refers to finding all possible feasible points As in COCOS 2002 the first such workshop see the proceedings 1 the emphasis was on complete solving techniques for problems involving continuous variables that provide all solutions with full rigor and on applications which however were allowed to have relaxed standards of rigor The participants used the opportunity to meet experts from global optimization mathematical programming constraint programming and applications and to present and discuss ongoing work and new directions in the field Four invited lectures and 20 contributed talks were presented at the workshop The invited lectures were given by John Hooker Logic Based Methods for Global Optimization Jean Pierre Merlet Usual and Unusual Applications of Interval Analysis Hermann Schichl The COCONUT Optimization Environment and Jorge Moré Global Optimization Computational Servers This volume contains the text of Hooker's invited lecture and of 12 contributed talks Copies of the slides for most presentations can be found at 2 Constraintsatisfactionproblems
