Shieh, 2015-02-27 Neuroscience is by definition a multidisciplinary field some scientists study genes and proteins at the molecular level while others study neural circuitry using electrophysiology and high resolution optics A single topic can be studied using techniques from genetics imaging biochemistry or electrophysiology Therefore it can be daunting for young scientists or anyone new to neuroscience to learn how to read the primary literature and develop their own experiments This volume addresses that gap gathering multidisciplinary knowledge and providing tools for understanding the neuroscience techniques that are essential to the field and allowing the reader to design experiments in a variety of neuroscience disciplines Written to provide a hands on approach for graduate students postdocs or anyone new to the neurosciences Techniques within one field are compared allowing readers to select the best techniques for their own work Includes key articles books and protocols for additional detailed study Data analysis boxes in each chapter help with data interpretation and offer guidelines on how best to represent results Walk through boxes guide readers step by step through experiments

Genomic management of animal genetic diversity J.K. Oldenbroek, 2023-08-07 Recently developed genomic tools like SNP genotyping and whole genome sequencing and their analysis offer great opportunities for the conservation and utilisation of animal genetic diversity both among and within breeds These genomic tools can be used to detect potentially valuable rare alleles and haplotypes They are important parts of the genetic diversity we need to conserve now for possible utilisation in the future This book describes the use of genomic technology to define breeds to measure diversity and to assess important features in the history of breeds affecting the present genetic diversity The management of genetic diversity with genomic tools is outlined both in vivo small populations of rare breeds or large populations with small effective population sizes and in vitro genebanks Special attention is given to the genomic management of populations of animals with high incidences of genetic defects This book is intended for MSc and PhD students scientists working with small populations in animal breeding and in conservation programmes for rare breeds Neurometabolic Hereditary Diseases of Adults
