**Technical Report** ,2005      **Foundation Course for Advanced Computer Studies** Franck Ismael Djédjé,2015-11-13 In the modern world computer systems are playing a greater and greater part in everyday life From office work to entertainment to providing information the personal computer is quickly becoming a more integral part of the home However most PC users have no idea how most of the parts which make up their computer work internally I am one of those who find that the framework provided by the school curriculum in the United Kingdom is of great assistance in planning lessons and learning plans but the curriculum does not plan out the work for us We therefore need to invest a lot of time and effort into developing schemes of work that will suit the people we are going to teach For me it is a fantastic opportunity to employ our imagination and creativity to make lessons useful and interesting for children of different abilities It is why I wrote this book This book is a foundation course for Advanced Computer Studies and designed as a blueprint to teach users with a basic knowledge of computer science Computer science is a subject that combines the use of technology which is ICT Information Communication Technology and the creation of technology To use ICT the subject about how to use technology to communicate information more effectively we need to know how technology works Computing or computer science will create a generation of young people able to work at the forefront of technology change It is the umbrella term for the subject that comprises 3 elements computer science information technology and digital literacy It is helpful to think of these as the foundations applications and implications of digital technology The new focus on computer science will provides a well defined and rigorous academic discipline and a unique lens through which pupils can understand the world Children must therefore be taught computing if they are to be ready for tomorrow technology challenges Our ingenuity to invent new means of communicating with each other our very human compulsion to communicate have driven the technological innovations of the past two centuries however still a lot remain to be done with the arrival of quantum computing A more rigorous approach to computer science teaching will help compete across the full spectrum of digital industries This can only be achieved by equipping ourselves with the foundation skills knowledge and understanding of computing do the necessity to

introduce computational thinking at school via the new national curriculum programmes of study and targets the 2014 national curriculum that introduces computing which will replace ICT
