Medical Visualization and Applications of Technology Paul M. Rea,2022-09-08 This edited book explores the use of technology to enable us to visualize the life sciences in a more meaningful and engaging way It will enable those interested in visualization techniques to gain a better understanding of the applications that can be used in visualization imaging and analysis education engagement and training The reader will also be able to learn about the use of visualization techniques and technologies for the historical and forensic settings The reader will be able to explore the utilization of technologies from a number of fields to enable an engaging and meaningful visual representation of the biomedical sciences We have something for a diverse and inclusive audience ranging from healthcare patient education animal health and disease and pedagogies around the use of technologies in these related fields The first four chapters cover healthcare and detail how technology can be used to illustrate emergency surgical access to the airway pressure sores robotic surgery in partial nephrectomy and respiratory viruses The last six chapters in the education section cover augmented reality and learning neuroanatomy historical artefacts virtual reality in canine anatomy holograms to educate children in cardiothoracic anatomy 3D models of cetaceans and the impact of the pandemic on digital anatomical educational resources *3ds Max Animation with Biped* Michele Bousquet,Michael McCarthy,2006 Autodesk 3ds Max is the application of choice for professional animators working in game design and film effects because of its amazing set of character animation tools But while the results these professionals achieve can be stunningly complex animating characters with 3ds Max doesn't have to be hard Its powerful Biped module with pre linked and realistically constrained skeletons and its suite of motion tools dramatically speeds up the animation process The easy to follow instructions in this book will have you animating your own characters in just a few hours **Digital Methods and Remote Sensing in Archaeology** Maurizio Forte,Stefano Campana,2017-02-10 This volume debuts the new scope of Remote Sensing which was first defined as the analysis of data collected by sensors that were not in physical contact with the objects under investigation using cameras scanners and radar systems operating from spaceborne or airborne platforms A wider characterization is now possible Remote Sensing can be any non destructive approach to viewing the buried and nominally invisible evidence of past activity Spaceborne and airborne sensors now supplemented by laser scanning are united using ground based geophysical instruments and undersea remote sensing as well as other non invasive techniques such as surface collection or field walking survey Now any method that enables observation of evidence on or beneath the surface of the earth without impact on the surviving stratigraphy is legitimately within the realm of Remote Sensing The new interfaces and senses engaged in Remote Sensing appear throughout the book

On a philosophical level this is about the landscapes and built environments that reveal history through place and time It is about new perspectives the views of history possible with Remote Sensing and fostered in part by immersive interactive 3D and 4D environments discussed in this volume These perspectives are both the result and the implementation of technological cultural and epistemological advances in record keeping interpretation and conceptualization Methodology presented here builds on the current ease and speed in collecting data sets on the scale of the object site locality and landscape As this volume shows many disciplines surrounding archaeology and related cultural studies are currently involved in Remote Sensing and its relevance will only increase as the methodology expands
