Manufacturing Company ,1990 **Bootstrapping** Thierry Bardini, 2000-12-01 Bootstrapping analyzes the genesis of personal computing from both technological and social perspectives through a close study of the pathbreaking work of one researcher Douglas Engelbart In his lab at the Stanford Research Institute in the 1960s Engelbart along with a small team of researchers developed some of the cornerstones of personal computing as we know it including the mouse the windowed user interface and hypertext Today all these technologies are well known even taken for granted but the assumptions and motivations behind their invention are not Bootstrapping establishes Douglas Engelbart s contribution through a detailed history of both the material and the symbolic constitution of his system s human computer interface in the context of the computer research community in the United States in the 1960s and 1970s Engelbart felt that the complexity of many of the world s problems was becoming overwhelming and the time for solving these problems was becoming shorter and shorter What was needed he determined was a system that would augment human intelligence co transforming or co evolving both humans and the machines they use He sought a systematic way to think and organize this coevolution in an effort to discover a path on which a radical technological improvement could lead to a radical improvement in how to make people work effectively What was involved in Engelbart s project was not just the invention of a computerized system that would enable humans acting together to manage complexity but the invention of a new kind of human the user What he ultimately envisioned was a bootstrapping process by which those who actually invented the hardware and software of this new system would simultaneously reinvent the human in a new form The book also offers a careful narrative of the collapse of Engelbart s laboratory at Stanford Research Institute and the further translation of Engelbart s vision It shows that Engelbart s ultimate

goal of coevolution came to be translated in terms of technological progress and human adaptation to supposedly user friendly technologies At a time of the massive diffusion of the World Wide Web Bootstrapping recalls the early experiments and original ideals that led to today s information revolution

Handbook of Water and Wastewater Systems

Protection Robert M. Clark,Simon Hakim,Avi Ostfeld,2011-09-01 Following the events of 9 11 the Administrator of the US Environmental Protection Agency created the Water Protection Task Force WPTF which identified water and wastewater systems as a major area of vulnerability to deliberate attack The WPTF suggested that there are steps that can be taken to reduce these vulnerabilities and to make it as difficult as possible for potential saboteurs to succeed The WPTF recommended that be scrutinized with renewed vigor to secure water and wastewater systems against these possible threats It also recommended that water and wastewater systems have a response plan in place in the event an act of terrorism occurs The WPTF identified water distribution networks as an area of special vulnerability and highlighted the need for rapid on line detection methods that are accurate and have a wide detection range As a result of these recommendations novel technologies from various fields of science and engineering are now addressing water security issues and water and wastewater utilities are looking for innovative solutions Once such technologies are available there will be a rapid implementation process that will present many business opportunities for the private sector However in addition to terrorist threats water and wastewater systems are inherently vulnerable to natural disasters such as earthquakes and floods This volume will address the problems associated with both intended terrorist attacks and natural disasters affecting water or wastewater systems The book is divided into parts based on the kinds of threats facing water and wastewater systems 1 a direct attack on water and wastewater infrastructure storage reservoirs and distribution and collection networks 2 a cyber attack disabling the functionality of the water and wastewater systems or taking over control of key components which might result in system failures and 3 a deliberate chemical or biological contaminant injection at one of the waterdistribution system s nodes It will examine unique plans technological and managerial innovations for protecting such systems and includes descriptions of projects that were implemented to respond to natural disasters Case studies are presented that discuss existing projects and evaluate their performance with an emphasis on providing guidelines and techniques that can be implemented by water and wastewater planners and managers to deal with natural and manmade disasters should they occur
