*Overtreated* Shannon Brownlee, 2010-06-25 Our health care is staggeringly expensive yet one in six Americans has no health insurance We have some of the most skilled physicians in the world yet one hundred thousand patients die each year from medical errors In this gripping eye opening book award winning journalist Shannon Brownlee takes readers inside the hospital to dismantle some of our most venerated myths about American medicine Brownlee dissects what she calls the medical industrial complex and lays bare the backward economic incentives embedded in our system revealing a stunning

portrait of the care we now receive Nevertheless Overtreated ultimately conveys a message of hope by reframing the debate over health care reform It offers a way to control costs and cover the uninsured while simultaneously improving the quality of American medicine Shannon Brownlee s humane intelligent and penetrating analysis empowers readers to avoid the perils of overtreatment as well as pointing the way to better health care for everyone      Landmarking and Segmentation of 3D CT Images Shantanu Banik,Rangaraj Rangayyan,Graham Boag,2022-06-01 Segmentation and landmarking of computed tomographic CT images of pediatric patients are important and useful in computer aided diagnosis CAD treatment planning and objective analysis of normal as well as pathological regions Identification and segmentation of organs and tissues in the presence of tumors are difficult Automatic segmentation of the primary tumor mass in neuroblastoma could facilitate reproducible and objective analysis of the tumor s tissue composition shape and size However due to the heterogeneous tissue composition of the neuroblastic tumor ranging from low attenuation necrosis to high attenuation calcification segmentation of the tumor mass is a challenging problem In this context methods are described in this book for identification and segmentation of several abdominal and thoracic landmarks to assist in the segmentation of neuroblastic tumors in pediatric CT images Methods to identify and segment automatically the peripheral artifacts and tissues the rib structure the vertebral column the spinal canal the diaphragm and the pelvic surface are described Techniques are also presented to evaluate quantitatively the results of segmentation of the vertebral column the spinal canal the diaphragm and the pelvic girdle by comparing with the results of independent manual segmentation performed by a radiologist The use of the landmarks and removal of several tissues and organs are shown to assist in limiting the scope of the tumor segmentation process to the abdomen to lead to the reduction of the false positive error and to improve the result of segmentation of neuroblastic tumors Table of Contents Introduction to Medical Image Analysis Image Segmentation Experimental Design and Database Ribs Vertebral Column and Spinal Canal Delineation of the Diaphragm Delineation of the Pelvic Girdle Application of Landmarking Concluding Remarks      MDCT Mannudeep K. *Image-guided Radiation Therapy* Arno J. Mundt,John C. Roeske,2010-12-31 Image Guided Radiation Therapy IGRT is a true revolution in the field of radiation oncology IGRT provides the unprecedented means of conforming dose to the shape of the target tissues in 3 dimensions reducing the risk of complications thereby improving the quality of life of irradiated patients Moreover IGRT provides the means to deliver higher than conventional doses thus improving the chance of cure in these patients Despite its established benefits several barriers exist to the widespread clinical implementation of IGRT In the past great concerns existed regarding the large capital outlay needed for both software and hardware This barrier is less relevant today given the increased reimbursements possible with IGRT Today the most significant barrier is education IGRT is a fundamentally new approach to both treatment planning and delivery Adoption of the IGRT approach entails new ways of thinking in regard to patient selection treatment planning and quality assurance measures Unfortunately apart from a few University based short courses limited resources are available for the physician and physicist interested in learning IGRT

Haynor,Joao Falcao e Cunha,Pierre Hellier,2004-09-02 The 7th International Conference on Medical Imaging and Computer Assisted Intervention MICCAI 2004 was held in Saint Malo

Brittany France at the Palais du Grand Large conference center September 26-29 2004 The purpose of hosting MICCAI 2004 was strongly encouraged and supported by IRISA Rennes. IRISA is a publicly funded national research laboratory with a staff of 370 including 150 full-time research scientists or teaching research scientists and 115 postgraduate students. INRIA, the CNRS, and the University of Rennes 1 are all partners in this mixed research unit and all three organizations were helpful in supporting MICCAI. MICCAI has become a premier international conference with in-depth perspectives on the multidisciplinary fields of medical image computing, computer-assisted intervention, and medical robotics. The conference brings together clinicians, biological scientists, computer scientists, engineers, physicists, and other researchers and offers them a forum to exchange ideas in these exciting and rapidly growing fields. The impact of MICCAI increases each year and the quality and quantity of submitted papers this year was very impressive. We received a record 516 full submissions (8 pages in length) and 101 short communications (2 pages) from 36 different countries and 5 continents (see figures below). All submissions were reviewed by up to 4 external reviewers from the Scientific Review Committee and a primary reviewer from the Program Committee. All reviews were then considered by the MICCAI 2004 Program Committee, resulting in the acceptance of 235 full papers and 33 short communications.
