nutrition Brian Clement MD Gabriel Cousens MD Compton Rom Bada Robert O Young PhD *Stratum Ventilation—Advanced Air Distribution for Low-Carbon and Healthy Buildings* Sheng Zhang, Yong Cheng, Zhang Lin, 2024-11-01 This book investigates the creation of healthy and thermally comfortable built environments in a low carbon manner with advanced air distribution i.e. stratum ventilation. Stratum ventilation efficiently supplies conditioned and clean air to the head level of occupants for thermal comfort and inhaled air quality and largely reduces energy consumption and CO₂ emission e.g. by 44% and 32% respectively compared with the conventional air distribution method. This book provides the working principles, performance evaluations, methods, design methods, operation methods, and different application scenarios, particularly highlighting airborne infection risk control of respiratory diseases and integrated application with renewable energy of stratum ventilation to provide theoretical understandings and technical guidelines of stratum ventilation. The book is intended for undergraduate and graduate students, researchers, and engineers who are interested in cutting edge technologies of livable and sustainable built environments. *Technical Abstract Bulletin*, **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1977 *Life Cycle Assessment in the Chemical Product Chain* Simone Maranghi, Carlo Brondi, 2020-02-05 This book outlines the methodologies, approaches, and tools for modelling chemicals in a Life Cycle Assessment (LCA) perspective and also covers the main advantages and drawbacks of applying LCA to chemical processes. In the first part of this book, authors pay close attention to the limitations of modelling the environmental and social impacts of chemical processes, providing valuable insights to the problems of the Life Cycle Inventory (LCI) analysis for chemical processes. In the second part of this book, readers will learn about the LCA application to chemical processes in the laboratory and industrial scale. In each chapter of this book, readers will also find specific case studies on the modelling and application of LCA in the chemical industry. *Life-Cycle Greenhouse Gas Emissions of Commercial Buildings* Cuong N. N. Tran, Vivian W. Y. Tam, Khoa N. Le, 2021-07-12 This book develops a model to evaluate and assess life cycle greenhouse gas emissions based on typical Australian commercial building design options. It also draws comparisons between some of the many green building rating tools that have been developed worldwide to support sustainable development. These include Leadership in Energy and Environmental Design (LEED) by the United States Green Building Council (USGBC), Building Research Establishment Environmental Assessment Method (BREEAM) by the Building Research Establishment, Comprehensive Assessment System for Building Environmental Efficiency (CASBEE) by the Japanese Sustainable Building Consortium, and Green Star Environmental Rating System by the Green Building Council of Australia. Life cycle assessment (LCA), life cycle energy consumption, and life cycle greenhouse gas emissions form the three pillars of life cycle studies, which have been used to evaluate environmental impacts of building construction. Assessment of the life cycle greenhouse gas emissions of buildings is one of the significant obstacles in evaluating green building performance. This book explains the methodology for achieving points for the categories associated with reduction of greenhouse gas emissions in

the Australian Green Star rating system The model for the assessment uses GaBi 8 7 platform along with Visual Basic in Microsoft Excel and shows the relationship between the building s energy consumption and greenhouse gas emissions released during the lifetime of the building The data gathered in the book also illustrates that the green building design and specifications are becoming more popular and are being increasingly utilized in Australia This book is important reading for anyone interested in sustainable construction green design and buildings and LCA tools *Social Innovation in Education* Claudia Fahrenwald,Nina Kolley,Andreas Schröer,Inga Truschkat,2022-01-21 Sustainable Design for Interior Environments Second Edition Susan M. Winchip,2011-10-10 Sustainable Design for Interior Environments 2nd Edition builds on the first edition s premise that the interior design profession has a social and moral responsibility to protect the health safety and welfare of people and the environment The text equips professors students and practitioners to design sustainable interiors by addressing LEED certification environmental concerns ecosystems ethics values worldviews and the ways in which science and technology can be used to address environmental challenges Through content organization and pedagogical features the book integrates complex sustainability topics directly into the design process thereby enabling readers to apply the concepts of sustainability with the same ease as they do the elements and principles of design
