*Luke 6:40 and the Theme of Likeness Education in the New Testament* Thomas W. Hudgins, 2014-01-07 What does Jesus mean when he says A disciple is not above his teacher but each disciple after being fully trained will be like his teacher Luke 6 40 This verse has been quoted cited and referenced in vast amounts of Christian education and discipleship literature Nevertheless the verse is nearly untouched in exegetical discussions with the exception of source critical analyses From this verse arises an undeveloped theme in the Gospel of Luke and the New Testament the theme of likeness education Using content analysis methodology Luke 6 40 one of the keystone passages in Christian education literature serves as the starting point for mining out the theme of likeness education in the New Testament This study consists of three concentric areas of investigation 1 Luke 6 40 and its immediate context 2 Luke Acts and 3 the New Testament corpus

**Manual of Romance Morphosyntax and Syntax** Andreas Dufter, Elisabeth Stark, 2017-09-25 This volume offers theoretically informed surveys of topics that have figured prominently in morphosyntactic and syntactic research into Romance languages and dialects We define syntax as being the linguistic component that assembles linguistic units such as roots or functional morphemes into grammatical sentences and morphosyntax as being an umbrella term for all morphological relations between these linguistic units which either trigger morphological marking e g explicit case morphemes or are related to ordering issues e g subjects precede finite verbs whenever there is number agreement between them All 24 chapters adopt a comparative perspective on these two fields of research highlighting cross linguistic grammatical similarities and differences within the Romance language family In addition many chapters address issues related to variation observable within individual Romance languages and grammatical change from Latin to Romance

*Carnap, Tarski, and Quine at Harvard* Greg Frost-Arnold, 2013-08-19 During the academic year 1940 1941 several giants of analytic philosophy congregated at Harvard Bertrand Russell Alfred Tarski Rudlof Carnap W V Quine Carl Hempel and Nelson Goodman were all in residence This group held regular private meetings with Carnap Tarski and Quine being the most frequent attendees Carnap Tarski and Quine at Harvard allows the reader to act as a fly on the wall for their conversations Carnap took detailed notes during his year at Harvard This book includes both a German transcription of these shorthand notes and an English translation in the appendix section Carnap s notes cover a wide range of topics but surprisingly the most prominent question is if the number of physical items in the universe is finite or possibly finite what form should scientific discourse and logic and mathematics in particular take This question is closely connected to an abiding philosophical problem one that is of central philosophical importance to the logical empiricists what is the relationship between the logico mathematical realm and the material realm studied by natural science Carnap Tarski and Quine s

attempts to answer this question involve a number of issues that remain central to philosophy of logic mathematics and science today This book focuses on three such issues nominalism the unity of science and analyticity In short the book reconstructs the lines of argument represented in these Harvard discussions discusses their historical significance especially Quine's break from Carnap and relates them when possible to contemporary treatments of these issues Nominalism The founding document of twentieth century Anglophone nominalism is Goodman and Quine's 1947 Steps Toward a Constructive Nominalism In it the authors acknowledge that their project's initial impetus was the conversations of 1940-1941 with Carnap and Tarski Frost Arnold's exposition focuses upon the rationales given for and against the nominalist program at its inception Tarski and Quine's primary motivation for nominalism is that mathematical sentences will be unintelligible or meaningless and thus perniciously metaphysical if contra nominalism their component terms are taken to refer to abstract objects Their solution is to re-interpret mathematical language so that its terms only refer to concrete entities and if the number of concreta is finite then portions of classical mathematics will be considered meaningless Frost Arnold then identifies and reconstructs Carnap's two most forceful responses to Tarski and Quine's view 1 all of classical mathematics is meaningful even if the number of concreta is finite and 2 nominalist strictures lead to absurd consequences in mathematics and logic The second is familiar from modern debates over nominalism and its force is proportional to the strength of one's commitment to preserving all of classical mathematics The first however has no direct correlate in the modern debate and turns upon the question of whether Carnap's technique for partially interpreting a language can confer meaningfulness on the whole language Finally the author compares the arguments for and against nominalism found in the discussion notes to the leading arguments in the current nominalist debate the indispensability argument and the argument from causal theories of reference and knowledge Analyticity Carnap Tarski and Quine's conversations on finitism have a direct connection to the tenability of the analytic synthetic distinction under a finitist nominalist regime portions of arithmetic a supposedly analytic enterprise become empirical Other portions of the 1940-41 notes address analyticity directly Interestingly Tarski's criticisms are more sustained and pointed than Quine's For example Tarski suggests that Gödel's first incompleteness theorem furnishes evidence against Carnap's conception of analyticity After reconstructing this argument Frost Arnold concludes that it does not tell decisively against Carnap provided that language is not treated fundamentally proof theoretically Quine's points of disagreement with Carnap in the discussion notes are primarily denials of Carnap's premises without argument They do however allow us new and more precise characterizations of Carnap and Quine's differences Finally the author forwards two historical conjectures concerning the radicalization of Quine's critique of analyticity in the period between Truth by Convention and Two Dogmas First the finitist conversations could have shown Quine how the apparently analytic sentences of arithmetic could be plausibly construed as synthetic Second Carnap's shift during his semantic period toward intensional analyses of linguistic concepts including synonymy perhaps made Quine an avowed extensionalist more skeptical

of meaning and analyticity Unity of Science The unity of science movement originated in Vienna in the 1920s and figured prominently in the transplantation of logical empiricism into North America in the 1940s Carnap Tarski and Quine s search for a total language of science that incorporates mathematical language into that of the natural and social sciences is a clear attempt to unify the language of science But what motivates the drive for such a unified science Frost Arnold locates the answer in the logical empiricists antipathy towards speculative metaphysics in contrast with meaningful scientific claims I present evidence that for logical empiricists over several decades an apparently meaningful assertion or term is metaphysical if and only if that assertion or term cannot be incorporated into a language of unified science Thus constructing a single language of science that encompasses the mathematical and natural domains would ensure that mathematical entities are not on par with entelechies and Platonic Forms The author explores various versions of this criterion for overcoming metaphysics focusing on Carnap and Neurath Finally I consider an obstacle facing their strategy for overcoming metaphysics there is no effective procedure to show that a given claim or term cannot be incorporated within a language **Ontario**
