

Exercise Answers Set 7

1. What methods are implemented in Critter? What does each do?
 - act, getActors, processActors, getMoveLocations, selectMoveLocation, makeMove
 - act checks that the Critter is in a grid and if so calls the other methods
 - getActors gets the neighboring (1 cell away) Actors
 - processActors eats (removes) actors that are not Rocks or Critters
 - getMoveLocations returns valid empty neighboring locations (1 cell away)
 - selectMoveLocation returns current location if no empty neighbors or a random empty neighbor
 - makeMove if the location is null remove self from grid otherwise move to the location
2. What are the 5 basic actions common to all Critters when they act?
 - Get actors to process, process the actors, get a list of locations, select a location, move
3. Should subclasses of Critter override the getActors() method?
 - Yes, if they want to control the type of actors to interact with or to get more than just the neighboring Actors (one cell away)
4. Describe 3 ways a Critter could process actors?
 - Change their color, Change their direction, remove them from the grid, etc
5. What 3 methods must be invoked to make a Critter move?
 - getMoveLocations, selectMoveLocation, makeMove.
6. Why is there no Critter constructor?
 - Because it inherits from Actor and Actor has a no-arg constructor so by not providing any constructors the compiler will add a no-arg constructor that calls super()
