Gene Interaction

WORKING WITH THE FIGURES

1. In Figure 6-1:
 - a. What do the yellow stars represent?
 - b. Explain in your own words why the heterozygote is functionally wild type.

Answer:

- a. Yellow stars represent mutations in the gene.
- b. Heterozygous is a functional genotype because there is a sufficient amount of a gene product from the second (wild type) gene on the second chromosome, which does not have a mutation.

2. In Figure 6-2, explain how the mutant polypeptide acts as a spoiler and what its net effect on phenotype is.

Answer: Consider the lower-right-hand panel in this figure: In the heterozygote, the mutant protein imposes its shape on the wild-type protein resulting in nonfunction.

3. In Figure 6-6, assess the allele V^+ . Is it dominant? Recessive? Codominant? Incompletely dominant?

Answer: Allele V^+ , which produces solid white patterns in a clover leaf, appears codominant with V^{++}

Brisson,2012-12-06 Increased interest in the basic biology of plants and microorganisms stems from the fact that crop productivity is directly affected by plant microbe interactions In spite of the fact that plants exist in the environment amongst diverse species of microorganisms only a few ever establish a direct relationship Emerging awareness concerning the indirect effect of microbial association on plant growth and the possibility of using one microbe against another for controlling pathogenic interactions is at the genesis of new fields of studies The primary reason for a microbe to associate with photoautotrophic organisms plants is to tap its nutritional requirements fixed carbon as a source of energy By hook or by crook a microbe must survive Some have evolved mechanisms to exploit plants to develop a niche for their biotrophic demands When in contact with a living plant microorganisms may live in a passive association using exudates from the plant invade it pathogenically or coexist with it in symbiosis The plant responds to the interloper either reacting in a hypersensitive manner to contain the invasion of pathogens or by inducing a set of genes that leads toward symbiosis or by simply succumbing to the invader Thus prior to contact with the plant microorganism is able to sense the presence of the host and activate accordingly a set of genes required for the forthcoming interaction whether symbiotic or pathogenic **High-Throughput Crop Phenotyping** Jianfeng Zhou, Henry T.
