Stephen Smale: The Mathematician Who Broke the Dimension Barrier Steve Batterson, 2012-12-30 In 1957 Stephen Smale startled the mathematical world by showing that in a

theoretical sense it is possible to turn a sphere inside out A few years later from the beaches of Rio he introduced the horseshoe map demonstrating that simple functions could have chaotic dynamics His next stunning mathematical accomplishment was to solve the higher dimensional Poincare conjecture thus demonstrating that higher dimensions are simpler than the more familiar three In 1966 in Moscow he was awarded the Fields Medal the most prestigious prize in mathematics Smale's vision and influence extended beyond mathematics into two vastly different realms In 1965 in Berkeley he initiated a program with Jerry Rubin of civil disobedience directed at ending the Vietnam War And as a mineral collector he accumulated a museum quality collection that ranks among the finest in the world Despite these diverse accomplishments Smale's name is virtually unknown outside mathematics and mineral collecting One of the objectives of this book is to bring his life and work to the attention of a larger community There are few good biographies of mathematicians This makes sense when considering that to place their lives in perspective requires some appreciation of their theorems Biographical writers are not usually trained in mathematics and mathematicians do not usually write biographies Though the author Steve Batterson is primarily a mathematician he has long been intrigued by the notion of working on a biography of Smale In this book Batterson records and makes known the life and accomplishments of this great mathematician and significant figure in intellectual history
