The Calculus Collection Caren L. Diefenderfer, Roger B. Nelsen, 2010-12-31 The Calculus Collection is a useful resource for everyone who teaches calculus in high school or in a 2 or 4 year college or university It consists of 123 articles selected by a panel of six veteran high school teachers each of which was originally published in Math Horizons MAA Focus The American Mathematical Monthly The College Mathematics Journal or Mathematics Magazine The articles focus on engaging students who are meeting the core ideas of calculus for the first time The Calculus Collection is filled with insights alternate explanations of difficult ideas and suggestions for how to take a standard problem and open it up to the rich mathematical explorations available when you encourage students to dig a little deeper Some of the articles reflect an enthusiasm for bringing calculators and computers into the classroom while others consciously address themes from the calculus reform movement But most of the articles are simply interesting and timeless explorations of the mathematics encountered in a first course in calculus Mathematical Modelling with Differential Equations Ronald E. Mickens, 2022-05-23 Mathematical Modelling with Differential Equations aims to introduce various strategies for modelling systems using differential equations Some of these methodologies are elementary and quite direct to comprehend and apply while others are complex in nature and require thoughtful deep contemplation Many topics discussed in the chapter do not appear in any of the standard textbooks and this provides users an opportunity to consider a more general set of interesting systems that can be modelled For example the book investigates the evolution of a toy universe discusses why alternate futures exists in classical physics constructs approximate solutions to the famous Thomas Fermi equation using only algebra and elementary calculus and examines the importance of truly nonlinear and oscillating systems Features Introduces defines and illustrates the concept of dynamic consistency as the foundation of modelling Can be used as the basis of an upper level undergraduate course on general procedures for mathematical modelling using differential equations Discusses the issue of dimensional analysis and continually demonstrates its value for both the construction and

analysis of mathematical modelling
