Define stem cells. - Answer Ability to regenerate or "self-renew"
Ability to differentiate into all diverse cell types

Describe hematopoiesis. - Answer Formation and development of blood cells

What cell type gives rise to all blood cells? - Answer Hematopoietic stem cell (HSC)

Why is the study of hematopoiesis difficult? - Answer Because there is roughly 1 HSC per 50,000 cells in bone marrow, HSC function decreases with age, "Lin" markers found on mature cells

Undifferentiated cells lack Lin (Lin-)

Describe the processes that lead to isolation of HSCs? - Answer Took monoclonal antibodies with iron particles attached to them. The cells with the antibody are kept using a magnet

What surface proteins are associated with HSCs? - Answer CD34: adhesion, HSC to stromal cells

Sca-1: function unknown

c-Kit: receptor tyrosine kinase; binds stem cell factor (SCF)

How are knockout mice made? - Answer start with a segment of DNA (that does not encode for the gene) that you want to replace with the gene of interest. Use a blastocyst, take a fetus cell, using electroporation the DNA is incorporated. Recombination occurs and the segment of DNA swap with the gene of interest. GOI becomes degraded. Take cells, grow into selective media that leave you with the cell minus the gene of interest. Re insert the cells into the blastocyst. You are left with a chimeric mouse, cross breed the mice with normal mice until you get a heterozygote mouse with the gene knocked out. Finally, check for blood cell production.

What genes are necessary for blood cell formation? - Answer GATA- 2
