

Wiring Instructions

The preferred method of bringing input signal in to the amplifier is with RCA cables from a quality tape or CD player. A high (speaker) level input signal may also be used if your factory deck or aftermarket source does not have low level RCA jacks. Regardless of which input is used the output RCA jacks on your KICKER Impulse amplifier will provide a low level signal for multiple amplifier configurations.

Some of the system possibilities are shown in the System Diagrams section of this manual.

When working with power connections always hook up the ground wire first and disconnect the ground wire last. Never make any wiring changes with the amplifier powered up.

The chassis mounted fuse(s) are in place to protect the circuitry of the amplifier in the event of major trouble. An in-line fuse must be installed within 18 inches of the battery to protect the power wire used to supply current to the amplifier. This fuse has to be at least as high of a value as the amplifier is supplied with. In-line fuse and recommended wire size are as follows:

IX 254	10Ga	10A fuse
IX 404	8Ga	30 A fuse
IX 704	4Ga	60A fuse

Any time that power wire goes through a metal panel such as the firewall, or if there is any chance of abrasion, it is necessary to use a grommet or other suitable form of protection to avoid shorts.

The ground wire should be as short as possible and attached to the body of the vehicle. The ground point must be free from paint and corrosion. Use the same size wire for ground connection as is used for power.

Mounting the IMPULSE Amplifier

After determining an appropriate mounting location which provides good air circulation and access to the end panel controls, use the supplied screws and washers to firmly mount the amplifier. The amplifier chassis can be used as a template for the screw locations. Check to make sure that the mounting screws will not damage any components on the back side of the chosen mounting surface.

If a vertical mounting surface is chosen, we recommend that the heatsink fins run vertically as shown for improved cooling.

For chassis isolation and to prevent engine noise from entering your system, it is important to use the plastic stepped washers and rubber isolators when mounting this amplifier.
