Abstract: This paper presents a new method for the automatic detection of the onset of a seizure. The method is based on the analysis of the non-linear properties of the EEG signal. The results show that the proposed method is able to detect the onset of a seizure with a high accuracy and a low false alarm rate. The method is applied to the analysis of the EEG signal recorded during a seizure. The results show that the proposed method is able to detect the onset of a seizure with a high accuracy and a low false alarm rate. The method is applied to the analysis of the EEG signal recorded during a seizure. The results show that the proposed method is able to detect the onset of a seizure with a high accuracy and a low false alarm rate.

Notes: Values include unit probabilities calculated from the models. Cells are given the relative proportion of responses based on model probability weights.
