Hargittai, 2016-02-25 Symmetry 2 aims to present an overview of the contemporary status of symmetry studies particularly in the arts and sciences emphasizing both its role and importance Symmetry is not only one of the fundamental concepts in science but is also possibly the best unifying concept between various branches of science the arts and other human activities Whereas symmetry has been considered important for centuries primarily for its aesthetic appeal this century has witnessed a dramatic enhancement of its status as a cornerstone in the sciences In addition to traditionally symmetry oriented fields such as crystallography and spectroscopy the concept has made headway in fields as varied as reaction chemistry nuclear physics

and the study of the origin of the universe The book was initiated in response to the success of the first volume which not only received good reviews but received the award for The Best Single Issue of a Journal by the Association of American Publishers for 1986 The second volume extends the application of symmetry to new fields such as medical sciences and economics as well as investigating further certain topics introduced in Symmetry The book is extensively illustrated and with over 64 contributions from 16 countries presents an international overview of the nature and diversity of symmetry studies today

Advances in Intelligent Systems Francesco Carlo Morabito,1997 Intelligent Systems can be defined as systems whose design mainly based on computational techniques is supported in some parts by operations and processing skills inspired by human reasoning and behaviour Intelligent Systems must typically operate in a scenario in which non linearities are the rule and not as a disturbing effect to be corrected Finally Intelligent Systems also have to incorporate advanced sensory technology in order to simplify man machine interactions Several algorithms are currently the ordinary tools of Intelligent Systems This book contains a selection of contributions regarding Intelligent Systems by experts in diverse fields Topics discussed in the book are Applications of Intelligent Systems in Modelling and Prediction of Environmental Changes Cellular Neural Networks for NonLinear Filtering NNs for Signal Processing Image Processing Transportation Intelligent Systems Intelligent Techniques in Power Electronics Applications in Medicine and Surgery Hardware Implementation and Learning of NNs
