implications for conservation strategies Large Carnivores and the Conservation of Biodiversity is the first detailed broad scale examination of the empirical evidence regarding the role of large carnivores in biodiversity conservation in both marine and terrestrial ecosystems It contributes to a much more precise and global understanding of when where and whether protecting and restoring top predators will directly contribute to the conservation of biodiversity Everyone concerned with ecology biodiversity or large carnivores will find this volume a unique and thought provoking analysis and synthesis

**Twelve Hundred Miles by Horse and Burro** Harley Shaw, Mara E. Weisenberger, 2022-05-31 J Stokley Ligon's work in bird conservation habitat protection and wildlife legislation during the mid twentieth century is well documented in his own writing and the writing of others But hovering in the background of Ligon's life story has always been the rumor of a trip he made alone as a young man in 1913 in which he covered much of New Mexico alone on horseback Details of the trip had faded into history and Ligon a self effacing man had never published the story As it turns out the trek was Ligon's first job with the US Biological Survey and it did not go entirely undocumented The breeding bird population report that eventually resulted from the journey photographs from glass plate negatives and perhaps most enticingly Ligon's own personal diary from these travels are presented here Not just a compelling account of the expedition itself the materials and insights found in this volume also reveal aspects of Ligon's family history his early interest in wildlife and the development of the wilderness skills needed to undertake such a survey Using his original itinerary and handwritten report the authors of this book revisited many of the places that Ligon surveyed and in a few cases were even able to locate and repeat Ligon's early photographs Combined with a discussion of the conditions of birds and other wildlife then and now this volume serves as a useful tool for understanding how wildlife numbers distribution and habitats changed in New Mexico over the course of the twentieth century Birding enthusiasts historians naturalists and even armchair adventurers will all find something to love in this chronicle of a young man from a West Texas ranching family with a driving ambition to be a professional naturalist and writer **Proceedings, Land Classifications Based on Vegetation**, 1989
