Question 1

[Maximum mark: 18]

- (a) Express $-3 + \sqrt{3}i$ in the form $re^{i\theta}$, where $r > 0$ and $-\pi < \theta \leq \pi$. [5]

Let the roots of the equation $z^3 = -3 + \sqrt{3}i$ be u , v and w .

- (b) Find u , v and w expressing your answers in the form $re^{i\theta}$, where $r > 0$ and $-\pi < \theta \leq \pi$. [5]

On an Argand diagram, u , v and w are represented by the points U , V and W respectively.

- (c) Find the area of triangle UVW . [4]

- (d) By considering the sum of the roots u , v and w , show that
$$\cos \frac{5\pi}{18} + \cos \frac{7\pi}{18} + \cos \frac{17\pi}{18} = 0.$$
 [4]

Question 2

[Maximum mark: 8]

- (a) Show that $\log_2(\cos 2x + 2) = \log_2 \sqrt{\cos 2x + 2}$. [3]

- (b) Hence or otherwise solve $\log_2(2 \sin x) = \log_2(\cos 2x + 2)$ for $0 < x < \frac{\pi}{2}$. [5]

Question 3

[Maximum mark: 5]

- (a) Show that $(2n - 1)^2 + (2n + 1)^2 = 8n^2 + 2$, where $n \in \mathbb{Z}$. [2]

- (b) Hence, or otherwise, prove that the sum of the squares of any two consecutive odd integers is even. [3]

Asymptotic Combinatorics with Application to Mathematical Physics V.A. Malyshev, A.M. Vershik, 2012-12-06 New and striking results obtained in recent years from an intensive study of asymptotic combinatorics have led to a new higher level of understanding of related problems the theory of integrable systems the Riemann Hilbert problem asymptotic representation theory spectra of random matrices combinatorics of Young diagrams and permutations and even some aspects of quantum field theory *Mathematical Modeling of Collective Behavior in Socio-Economic and Life Sciences* Giovanni Naldi, Lorenzo Pareschi, Giuseppe Toscani, 2010-08-12 Mathematical modeling using dynamical systems and partial differential equations is now playing an increasing role in the understanding of complex multi scale phenomena Behavior in seemingly different areas such as sociology economics and the life sciences can be described by closely related models Using examples from financial markets and modern warfare to the flocking of birds and the swarming of bacteria the collected research in this volume demonstrates the common methodological approaches and tools for modeling and simulating collective behavior The topics presented point toward new and challenging frontiers of applied mathematics making the volume a useful reference text for applied mathematicians physicists biologists and economists involved in the modeling of socio economic systems *A Systemic Perspective on Cognition and Mathematics* Jeffrey Yi-Lin Forrest, 2013-02-28 This book is devoted to the study of human thought its systemic structure and the historical development of mathematics both as a product of thought and as a fascinating case analysis After demonstrating that systems research constitutes the second dimension of modern science the monograph discusses the yoyo model a recent ground breaking development of systems research which has brought forward revolutionary applications of systems research in various areas of the traditional disciplines the first dimension of science After the systemic structure of thought is factually revealed mathematics as a product of thought is analyzed by using the age old concepts of actual and potential infinities In an attempt to rebuild the system of mathematics this volume first provides a new look at some of the most important paradoxes which have played a crucial role in the development of mathematics in proving what these paradoxes really entail Attention is then turned to constructing the logical foundation of two different systems of mathematics one assuming that actual infinity is different than potential infinity and the other that these infinities are the same This volume will be of interest to academic researchers students and professionals in the areas of systems science mathematics philosophy of mathematics and philosophy of science

Lecture Notes on the Mathematical Theory of Generalized Boltzmann Models N. Bellomo, Mauro Lo Schiavo, 2000 This book is based on the idea that Boltzmann like modelling methods can be developed to design with special attention to applied sciences kinetic type models which are called generalized kinetic models In particular these models appear in evolution equations for the statistical distribution over the physical state of each individual of a large population The evolution is determined both by interactions among individuals and by external actions Considering that generalized kinetic

models can play an important role in dealing with several interesting systems in applied sciences the book provides a unified presentation of this topic with direct reference to modelling mathematical statement of problems qualitative and computational analysis and applications Models reported and proposed in the book refer to several fields of natural applied and technological sciences In particular the following classes of models are discussed population dynamics and socio economic behaviours models of aggregation and fragmentation phenomena models of biology and immunology traffic flow models models of mixtures and particles undergoing classic and dissipative interactions The Mathematical Gazette ,2008
