

# DeltaV Safety Instrumented System (SIS)<sup>™</sup> with IS Electronic Marshalling

- Intrinsically Safe (IS) architecture per IEC 61508
- Integrated gateway modules per channel
- Optimized process reliability
- Simplified safety lifecycle management
- Flexibility to meet project needs
- Reduced installed cost of system
- Field-mounted capacitor hardware

## Introduction

The DeltaV SIS process safety system has uniquely evolved modular architecture that is based on the Emerson's proven logic solver (PLC) and the proven DeltaV marshalling modules. With the Emerson SIS processing, the DeltaV logic solver and gateway are single hardware. The PLC supports up to 64 individually-configurable channels, allowing flexibility for programming safety instrumented functions and to design specifically the architecture to meet the DeltaV system architecture. Microprocessors are completely reloaded from the channel (PLC) memory to the PLC. Integrated power supply and capacitor are also in the PLC.

The system architecture also supports the operation, provides significant control in system design, installation, and ease of maintenance required to maintain the marshalling with the safety logic. The safety architecture is also the same as the logic and control architecture of regular hardware and the associated safety related wiring is not for process related and also with significant cost savings.

The DeltaV SIS process safety system has the same architecture, using the proven logic solver and gateway to increase the reliability of the safety architecture. The system is also the same as the logic and control architecture of regular hardware and the associated safety related wiring is not for process related and also with significant cost savings.
